# INTRODUCTION

Companies seek to develop their technological environments in terms of project management in order to facilitate the smooth running of projects during its phases, limit delay problems, follow-up and control the progress of work by employees through planning.

Thus, to successfully carry out our project successfully, it would be necessary to follow an effective methodical approach for our work in order to meet the needs. This report is divided into four main chapters:

- The first chapter is entitled State of the art, gives a presentation of the general framework, the study of the existing and the methodology to be used to carry out our project.
- The second chapter is entitled Analysis and Specification of Needs, which represents the functional and non-functional needs, as well as the breakdown of our project with the planning of the various activities which are affiliated to it and the architecture and technologies used.
- The two chapters which follow constitute the body of our report which will be subdivided in two parts Release 1 and, Release 2.  
Each of them first presents the organization of the sprints carried out as well as their functional specification. Then, we will illustrate the use case diagrams as well as their textual description, and we will describe the different scenarios via the sequence diagrams. Finally we will present some interfaces illustrating our realization.

---

# Chapter 1: General framework from project

## Summary

---

	1.3.1 Scrum.....		4
	1.3.2 Roles in scrum.....		4
1.4	Gantt chart .....		5
1.5	Conclusion.....		5

---

## 1.1 INTRODUCTION

In this chapter, we are going to set up objectives to be achieved in the application, starting from what already exists.

## 1.2 Study of the existing

In this part, we will describe one of the software commonly used in the market, then, focus on the problem and the proposed solution.

### MS Planner

MS Planner offers an extremely collaborative environment for effective teamwork. When creating a folder (Plan), it is possible to invite other colleagues to participate in order to assign them tasks and deadlines to be respected. Then the team manager can export everyone's tasks and due dates to their respective Outlook calendar.

Different types of permissions can be assigned to colleagues: administrator, guest, etc. When an administrator makes a change to a task or deadline in Planner or Outlook, all of their teammates receive an automated notification in their inbox. At all times, team members have access to the common task calendar.

### 1.2.1 Problem

As part of our project, we concluded that after discussing with the manager within our department, we found that the latter does not have any tool that allows us to visualize the progress of the various projects to be managed as well. than to ensure the collaboration of employees in assigned tasks.

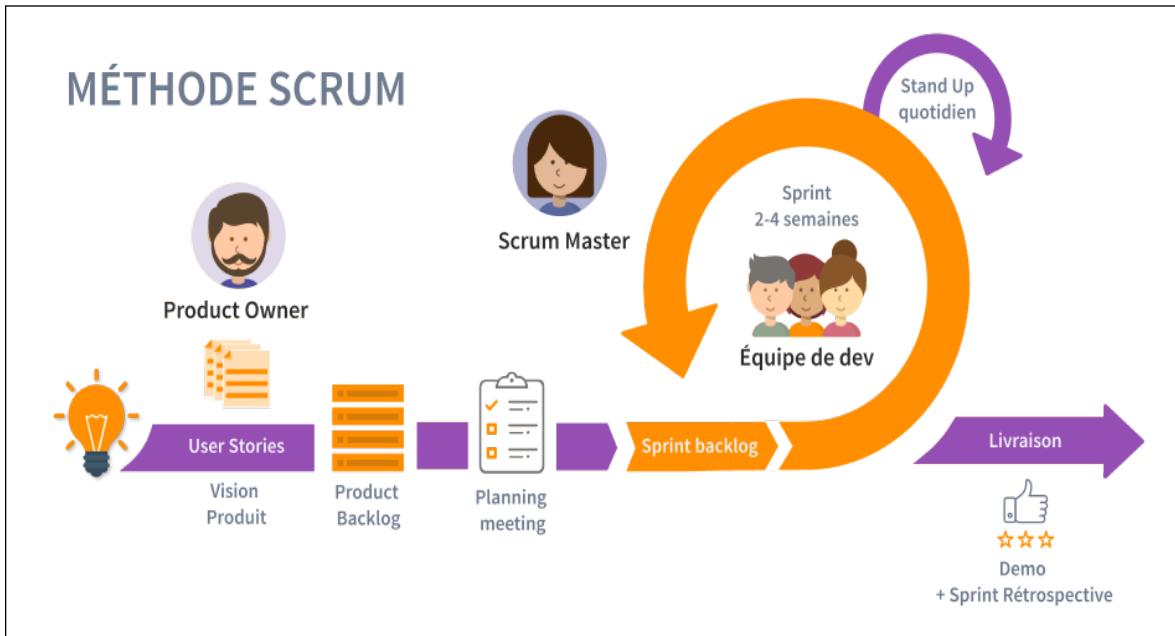

### 1.2.2 Planned solution

By ensuring the technological development of our activities within our department and in order to solve the problem mentioned above, we are going to develop an application

web to create a platform dedicated to the employees of our department, and this for the reason of assigning projects to the employees concerned by ensuring their follow-up by managers.

## 1.3 Development methodology

### 1.3.1 Scrum

Scrum presents the most popular agile method. It is characterized as incremental, by its development its short iterations and its reduced formalism. This figure on which SCRUM is based:  illustrates the process

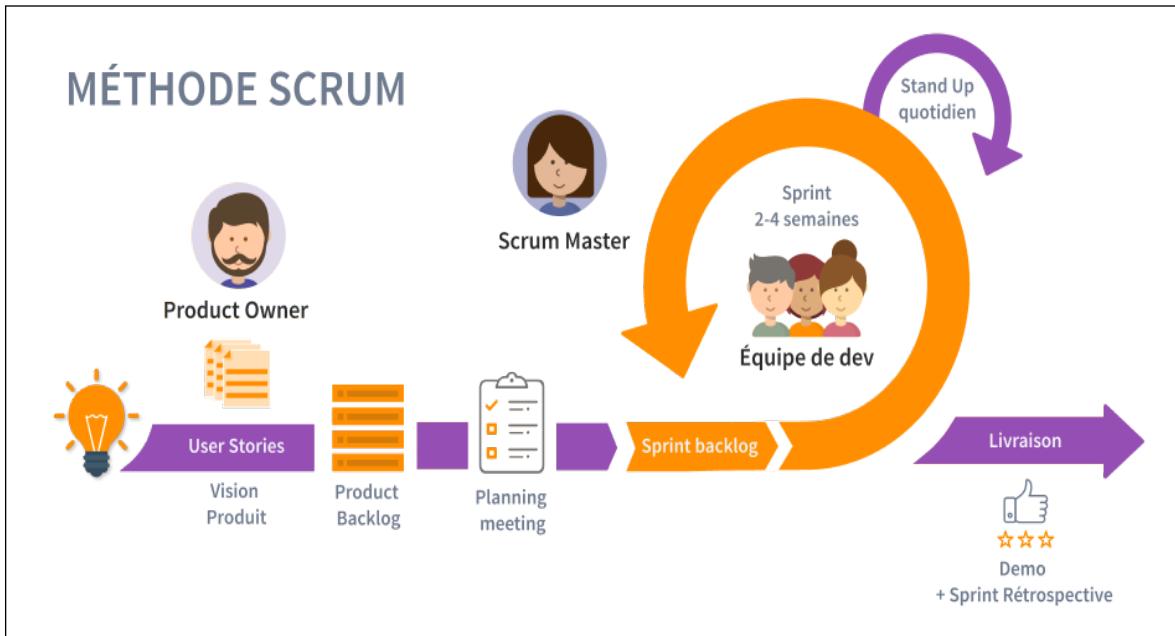

FIGURE 1.1: Scrum process

### 1.3.2 Roles in scrum

The Scrum method defines only three roles for a business expert a project : Product Owner: one who carries the vision of the product to be achieved. Development team: it is the team responsible for transforming the needs expressed by the Product Owner into usable functionalities. ScrumMaster: who must master Scrum and ensure that it is applied correctly.

## 1.4 Gantt chart

## 1.5 Conclusion

In this first chapter, we have described the solutions already existing on the market (MS Planner), presenting the incompatibility of these solutions in our organization. Then, we set out the problematic of our project, while providing criticism and possible solutions. Finally, we explained the choice of the development methodology used and we presented the Gantt chart.

## Chapter

# 2

# Analysis and specification of needs

2.6.3	diagram.....	.....	28

## 2.1 INTRODUCTION

The needs analysis, the first phase of a project, conditions its success insofar as it defines the real needs of those who will use the end result. This is the phase of communication and exchange, it is often the reflection of the end result. Suddenly, we will approach the analysis of use cases, the functions offered by the system and the actors with whom it interacts.

## 2.2 Functional requirements

We will illustrate our functional needs through a list (list of functional needs) and based on a static context diagram and another dynamic with a description of the use cases of each actor in our system. Finally, there will be a good presentation of our general use case diagram and a summary table of the use cases mentioned before. Indeed, the functional needs or the use cases in terms of UML can be defined as follows: "A use case represents a set of sequences of actions carried out by the system and producing an observable result. interesting for a particular actor."

### 2.2.1 Static context diagram

This UML diagram is simply used to show the relationship of the different actors with the system. It specifies the number of instances of each actor connected to the system at a given time.

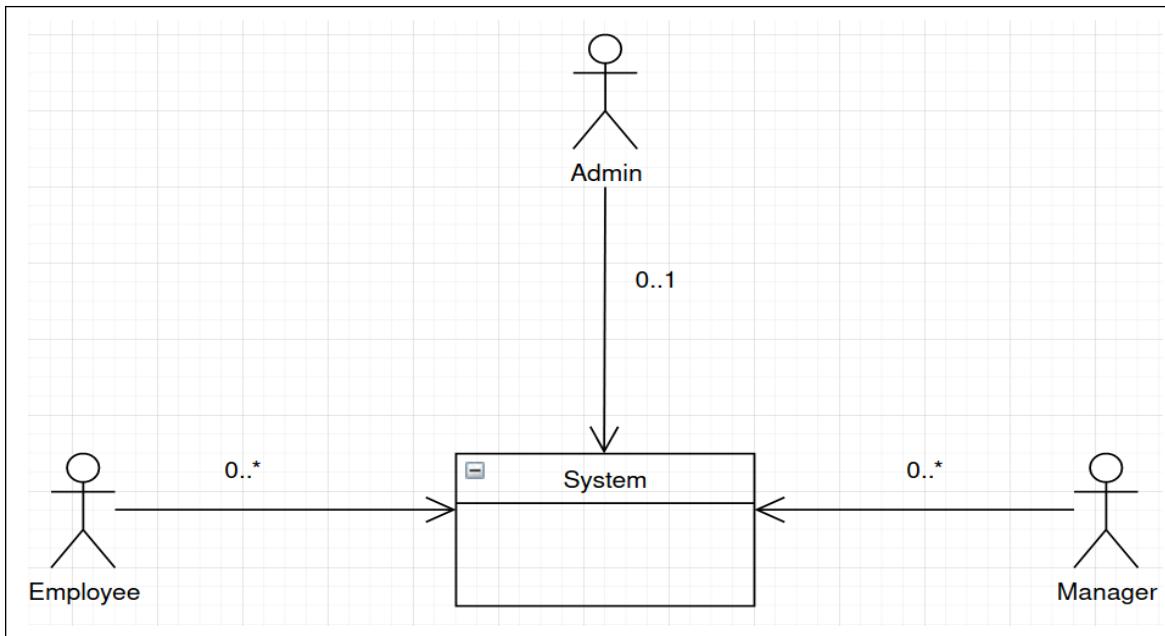

FIGURE 2.1: Static context diagram

## 2.2.2 Dynamic context diagram

The purpose of the dynamic context diagram is to highlight the roles and responsibilities of each category of actor vis-à-vis the system.

To keep it readable, we cannot detail all the actions of the players linked to the main functionalities of the system.

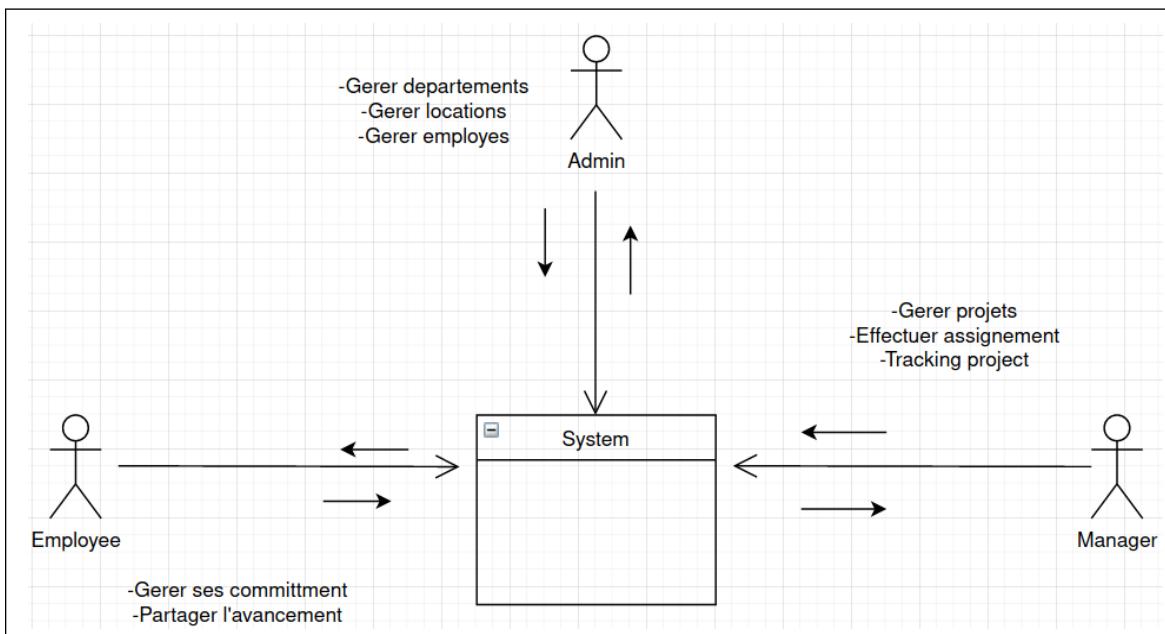

FIGURE 2.2: Dynamic context diagram

### 2.2.3 Lists of functional requirements

As mentioned before, a use case is a sequence of actions performed by the system in order to respond to a request from a user (ie: actor). In the following, we describe the different functional needs of our system:

#### 1. Employee:

- Share progress: The employee must share their progress according to a commitment date with a description.
- Consult the affected projects: The employee can list the different projects affected by his manager
- Consult his commitment dates: the employee can view his various commitments dates for each project assigned to it.

#### 2. Manager:

- Consult progress status: The manager must consult the progress status of each project assigned to one or more employees.
- Consult the assigned projects: The manager can list the different projects assigned to the employees.
- Ensure follow-up: The manager can ensure the follow-up of each project by adding a comment on the description of the employee.
- Creation of a project: The manager can create projects.
- Assign a project: The manager can assign a project to one or more employees.
- Manage a project: The manager can manage a project / assignment.

#### 3. Admin:

- Manage rentals: The administrator must manage the rentals of the different departments.
- Manage departments: The administrator must manage the departments of different employees.
- Manage employees: The administrator must manage all employees.

#### **2.2.4 Lists of non-functional requirements**

##### **Ergonomics and flexibility:**

The application must offer a user-friendly and ergonomic interface that can be used by the user by considering all the possible interactions on the screen of the support held.

##### **Speed:**

The application must optimize the processing to have a reasonable schema generation time.

##### **Efficiency:**

The application must be functional regardless of any circumstances that may surround the user.

### **2.3 Architecture and technologies**

In this part, we describe the architecture of Spring Framework as well as the technologies and the different layers used.

#### **2.3.1 Spring Framework Architecture**

Spring is an open source framework for building and defining the infrastructure of a Java application, for which it facilitates development and testing. It provides many functionalities which are sometimes redundant or which can be configured or used in several ways: this leaves the choice to the developer to use the solution which suits him best and / or which meets the needs.

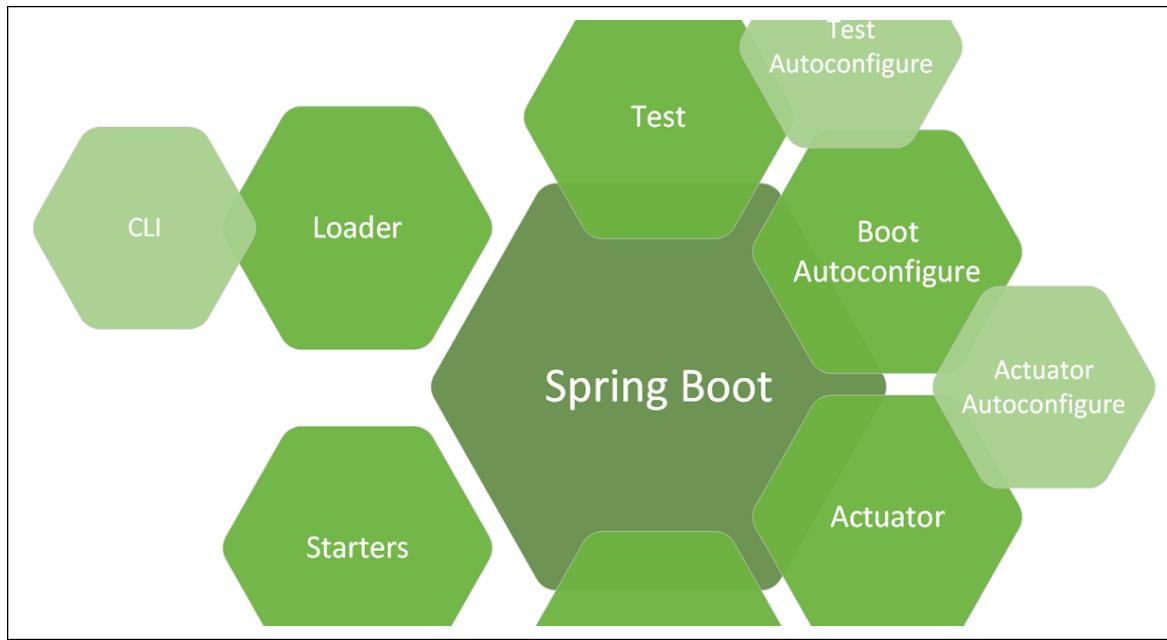

FIGURE 2.3: Spring Modules

**Spring Core Framework:** Spring Core is based on an IoC type container, ensuring the management of the life cycle of Beans and the injection of dependencies as well as the use of AOP and several other layers.

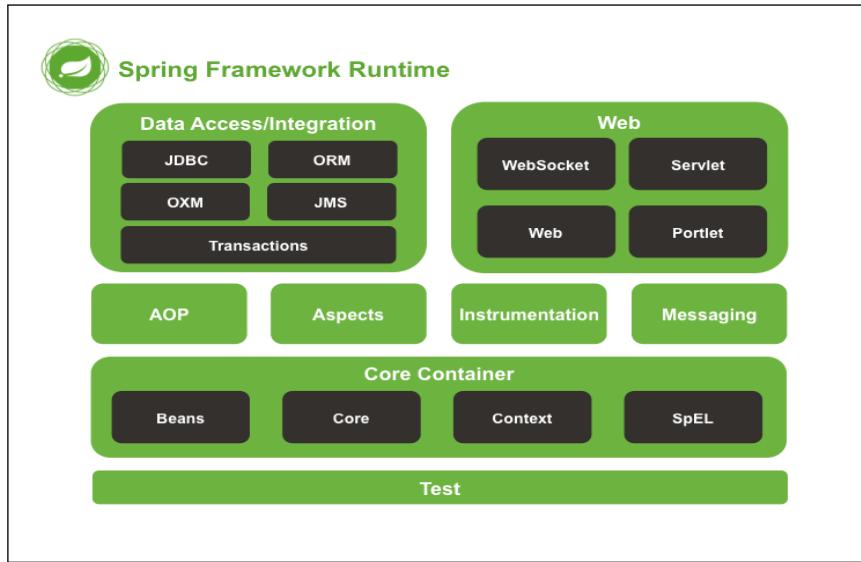

FIGURE 2.4: Spring Core Framework

### Spring MVC Architecture

Spring MVC is one of the most widespread Frameworks in the Java world: its popularity has grown thanks to the complexity of Java EE, especially for its versions prior to version 5, but also thanks to the quality and the richness of the functionalities that it offers. he proposes.

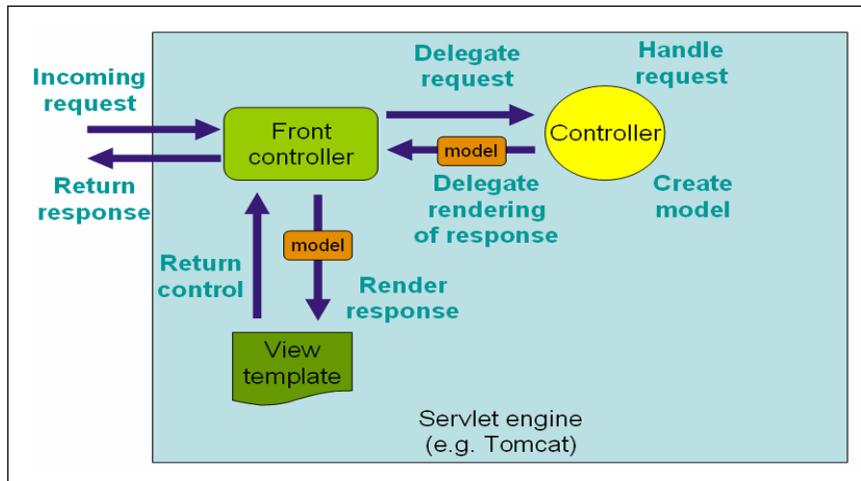

FIGURE 2.5: Spring MVC Architecture

### 2.3.2 Application architecture

The application to be developed is an MVC web application which will be divided mainly into four Layers:

- Domain Layer.
- Data Access Layer.
- Layer Services.
- Business Layer.

The diagram below will represent the main layers to be developed.

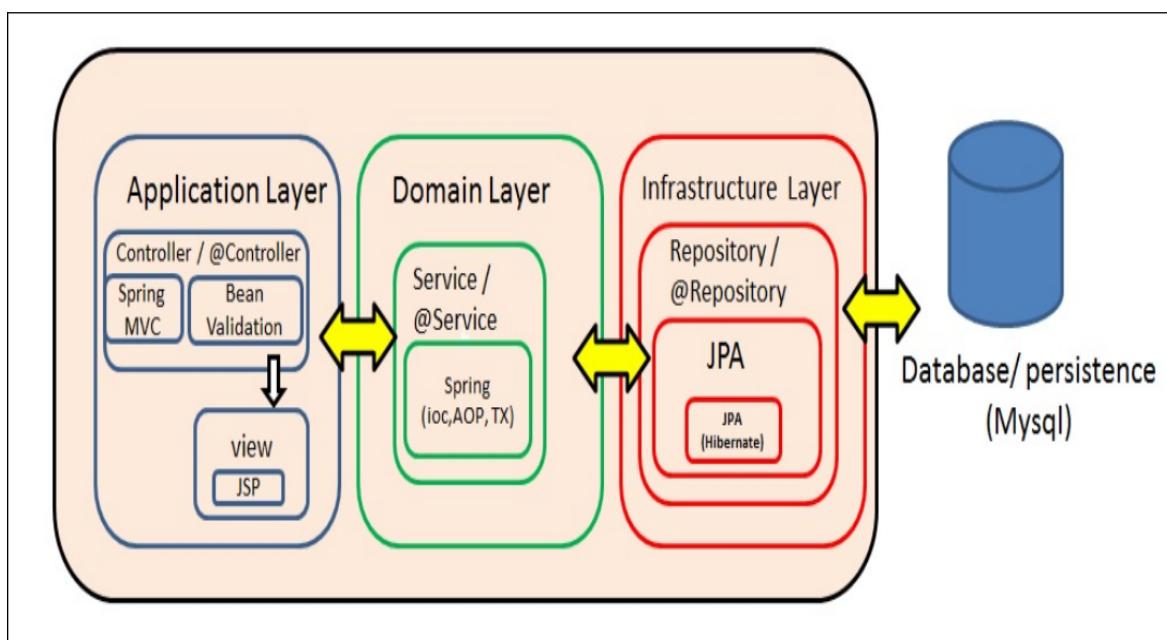

FIGURE 2.6: Spring MVC Architecture

## 2.4 Work environment

In this part we specify the development environment in which we carried out our project.

### 2.4.1 Software Environments

- **Java:**

Our famous Java programming language is an object oriented language created by James Gosling and Patrick Naughton, employees of Sun Microsystems, with the support of Bill Joy (co-founder of Sun Microsystems in 1982), officially presented on May 23, 1995 at SunWorld. The Sun company was then bought in 2009 by the Oracle company which now owns and maintains Java. The peculiarity and central objective of Java is that software written in this language should be very easily portable to several operating systems such as Unix, Windows, Mac OS or GNU / Linux, with little or no modification. For this, various platforms and associated frameworks aim to guide, if not guarantee, this portability of applications developed in Java.

FIGURE 2.7: Java logo

- **Maven:**

Maven is a tool for automating the management of Java projects. It offers between other the following features:

Compilation and deployment of Java applications (JAR, WAR). Management of libraries required by the application.

Execution of unit tests.

Generation of project documentation (website, pdf, Latex). Integration into different IDEs (Eclipse, JBulder).

FIGURE 2.8: Apache Maven logo

- **Apache Tomcat:**

Apache Tomcat is a free web container for servlets and JSP. Coming from the Jakarta project, it is one of the many projects of the Apache Software Foundation. It implements the Java Community Process servlet and JSP specifications, is configurable through XML files and properties, and includes tools for configuration and management. It also has an HTTP server.

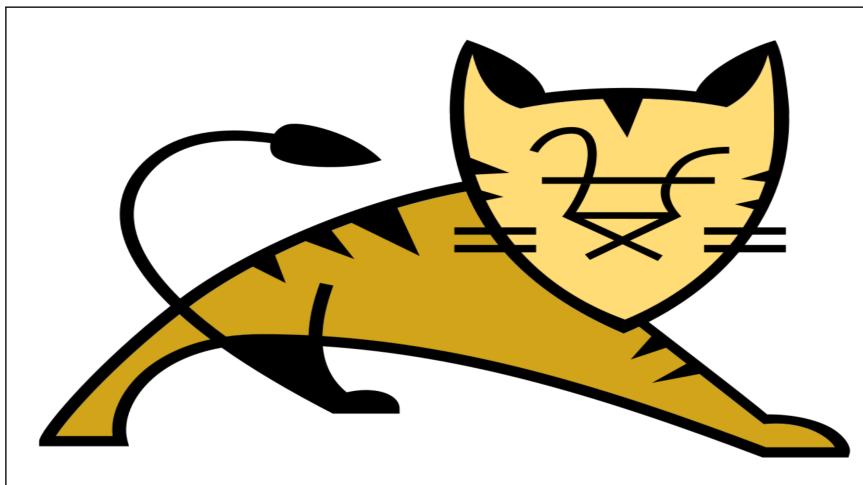

FIGURE 2.9: Apache Tomcat logo

- **Spring Boot:**

Spring Boot is a JAVA development framework. It is a variation of the classic Spring framework which essentially allows the creation of micro services

FIGURE 2.10: Spring Boot logo

- **Thymeleaf:**

Thymeleaf is a template engine, licensed under Apache 2.0, written in Java that can generate XML / XHTML / HTML5. Thymeleaf can be used in an environment

web or not web. Its main purpose is to be used in a web environment for view generation for web applications based on the MVC model.

FIGURE 2.11: Thymeleaf logo

- **Docker:**

Docker is free software for launching applications in software containers. According to industry research firm 451 Research, "Docker is a tool that can package an application and its dependencies in an isolated container, which can be run on any server."

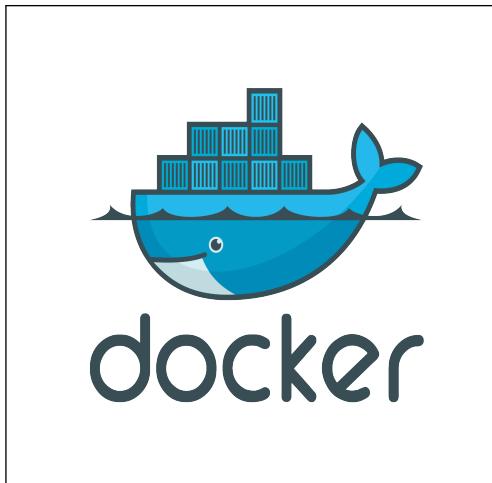

FIGURE 2.12: Docker logo

- **Postman:**

Postman allows you to build and execute HTTP requests, to store them in a history in order to be able to replay them, but above all to organize them in Collections. This classification makes it possible in particular to group requests together in a "functional" manner (for example a chain of adding an item to the basket, or else an identification process).

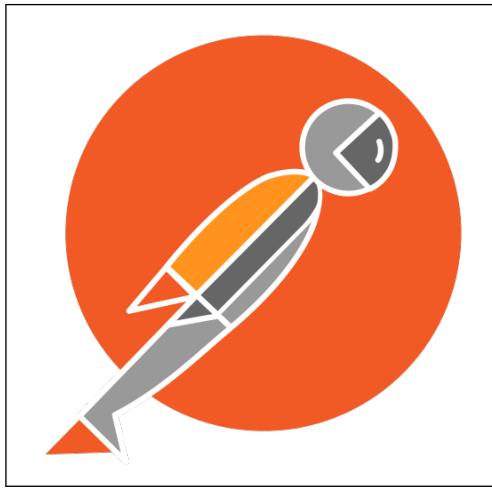

FIGURE 2.13: Postman logo

- **Swagger:**

Swagger is an open source project launched by a Startup in 2010. The objective is to set up a Framework that will allow developers to document and design APIs, while maintaining synchronization with the code.

FIGURE 2.14: Swagger logo

- **JUnit:**

JUnit is a unit testing framework for the Java programming language. Created by Kent Beck and Erich Gamma, JUnit is arguably the most successful project in the xUnit series. JUnit defines two types of test files

FIGURE 2.15: JUnit logo

- **Mysql:**

MySQL is a relational database management system (RDBMS). It is distributed under a dual GPL and proprietary license. It is one of the most widely used database management software in the world<sup>4</sup>, both by the general public (mainly web applications) and by professionals, in competition with Oracle, PostgreSQL and Microsoft SQL Server.

FIGURE 2.16: Mysql logo

- **H2:**

H2 is a relational database management system written in Java. It can be integrated into a Java application or operate in client-server mode. It supports a subset of the SQL standard. It offers SQL and JDBC programming interfaces (APIs); however it can also use the PostgreSQL ODBC driver and behave as a PostgreSQL server. Tables can be created in RAM or on disk. They can be persistent or temporary. Indexes are hash tables and trees for in-memory tables, and B trees for on-disk tables<sup>8</sup>. All data manipulation is transactional. Table-level locking as well as multiversion concurrency is implemented.

FIGURE 2.17: Logo of H2

- **Git:**

Git is decentralized version management software. It is free software created by Linus Torvalds, author of the Linux kernel, and distributed under the terms of the GNU General Public License version 2. As of 2016, it is the most popular version control software that is used by over twelve million people. Similar in this to GitLab, Git does not rely on a centralized server, but uses a peer-to-peer connection system.

FIGURE 2.18: Git logo

- **Spring Tool Suite:**

Spring has its own Eclipse plugin called STS (Spring Tool Suite). This allows Spring to be efficiently integrated into the development environment.

FIGURE 2.19: STS logo

- **Heroku:**

Heroku is a company creating server software that enables the deployment of web applications.

FIGURE 2.20: Heroku logo

- **Latex:**

Is a description language giving users the means of word processing. It allows to design professional quality documents without knowledge of their form.

FIGURE 2.21: Latex

## 2.5 Project management with scrum

For the management of our project, we will follow the agile SCRUM method. In this part, we identify the scrum team, then we present the product backlog as well as sprint planning.

### 2.5.1 Identification of the SCRUM team

In our project, the roles are organized as follows:

**Product owner:** Ms. Safa Saoudi

**Scrum master:** Selim HORRI, Badreddine AIDOUDI, Imen TOUKEBRI

**Scrum team:** Selim HORRI, Badreddine AIDOUDI, Imen TOUKEBRI

## 2.6 Product backlog

The functionalities to be developed are described in the form of user stories<sup>1</sup> in the product backlog which contains all the technical needs. Table 2.3 shows our prioritized product backlog, in the stories are defined by the MOSCOW priority such as:

- M: Must
- S: Should
- C: Could
- W: Won't

Task	Role	Priority
The administrator must manage the rentals of the different departments	Administrator	M
The administrator must manage the departments of different employees	Administrator	S
The administrator must manage all employees	Administrator	S
The employee must share their progress according to a commitment date with a description	Employee	S
The employee can list the different projects affected by his manager	Employee	VS

## CHAPTER 2. ANALYSIS AND SPECIFICATION OF NEEDS

---

the employee can view his various commitments dates for each project assigned to it.	Employee	VS
The manager must consult the progress of each project assigned to one or more employees.	Manager	M
The manager can list the different projects assigned to employees	Manager	M
The manager can create projects	Employee	M
The manager can assign a project to one or more employees.	Manager	VS
The manager can manage a project / assignment	Manager	VS

### 2.6.1 General Use Case Diagram

In this part, we present the overall use case diagram. This last one is the first UML diagram that captures the behavior of a system. It describes the operation of the system in coherent units which are the use cases. These make it possible to express the needs of the users of a system.

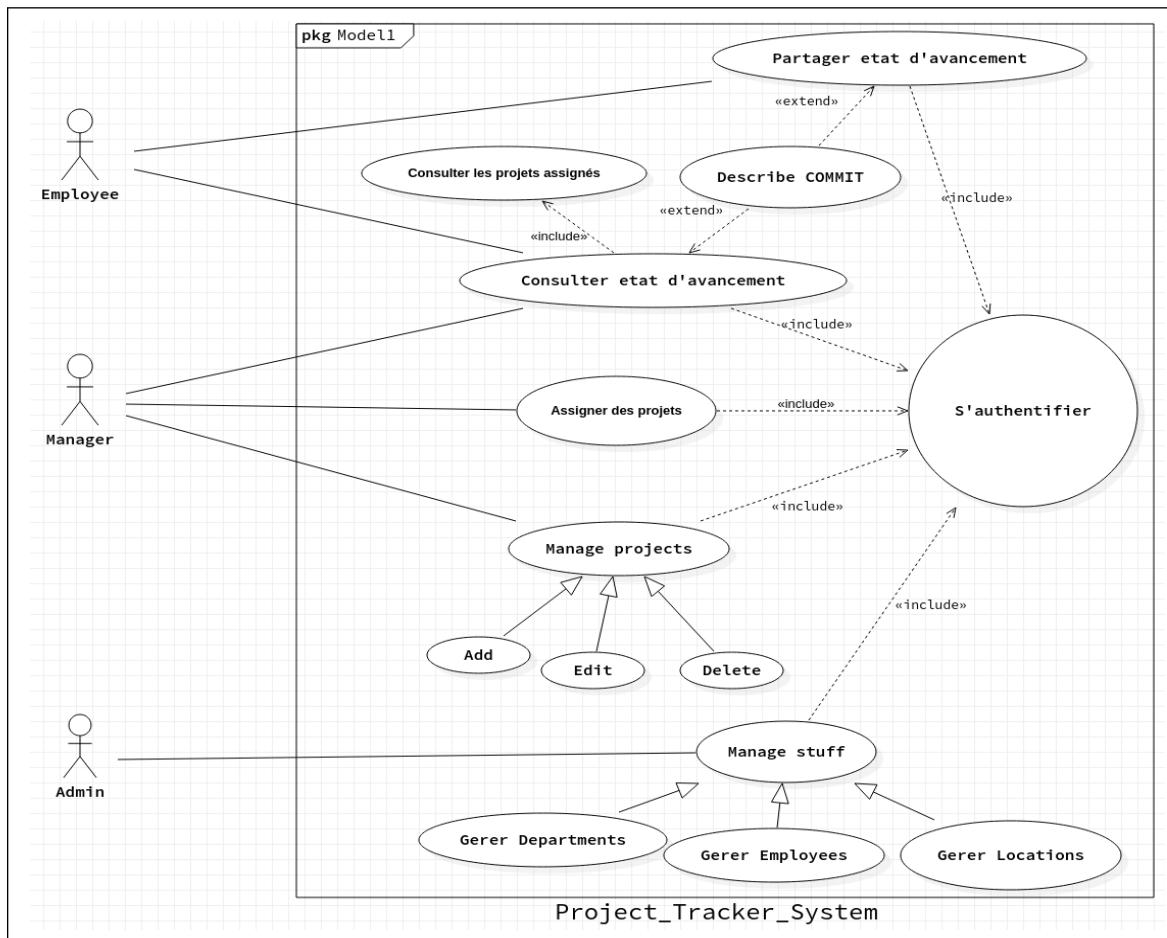

FIGURE 2.22: General use case diagram

## 2.6.2 Class diagram

The class diagram is a diagram used in software engineering to present the classes and interfaces of systems as well as the different relationships between them. This diagram is part of the static part of UML because it disregards the temporal and dynamic aspects.

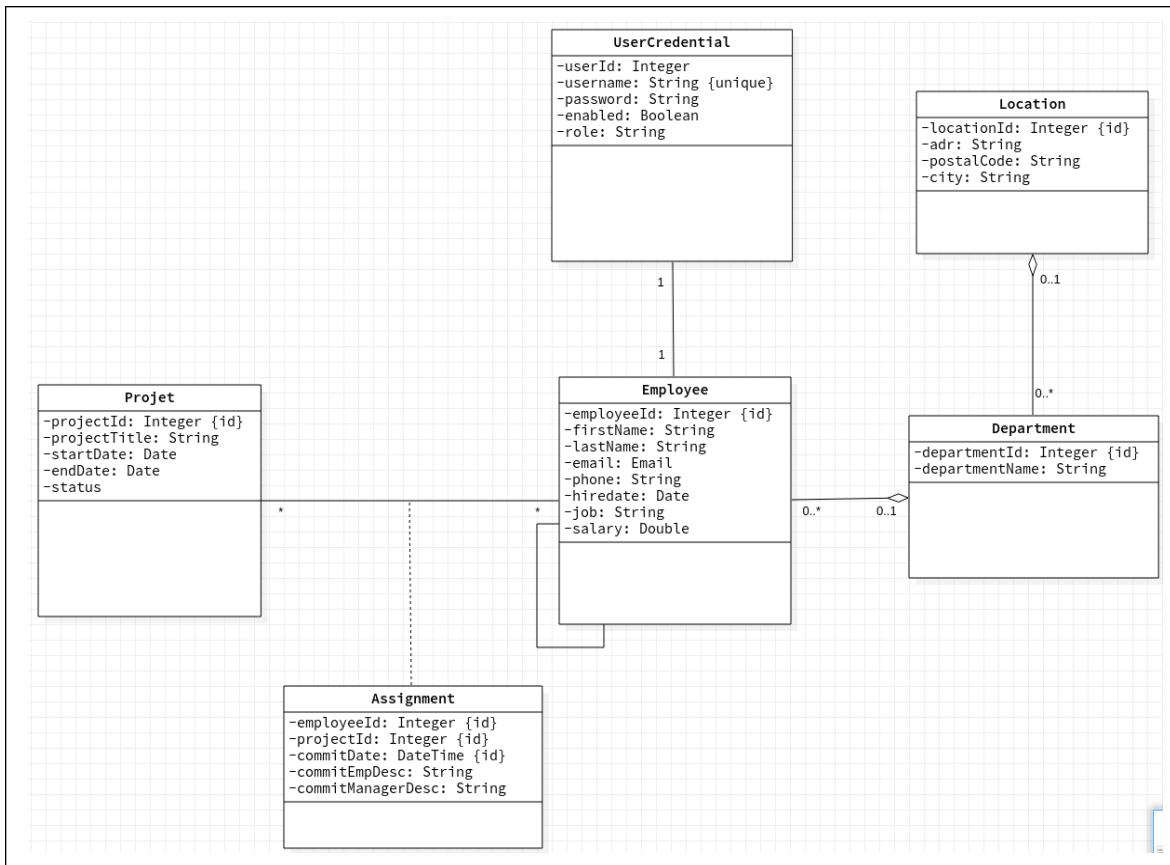

FIGURE 2.23: Class diagram

### 2.6.3 ERD diagram

Entity relationship diagram, also known as ERD, ER diagram, or ER model, is a type of structural diagram for use in database design. An ERD contains different symbols and connectors that visualize two

important information: the main entities within the scope of the system and between these entities. the relationships

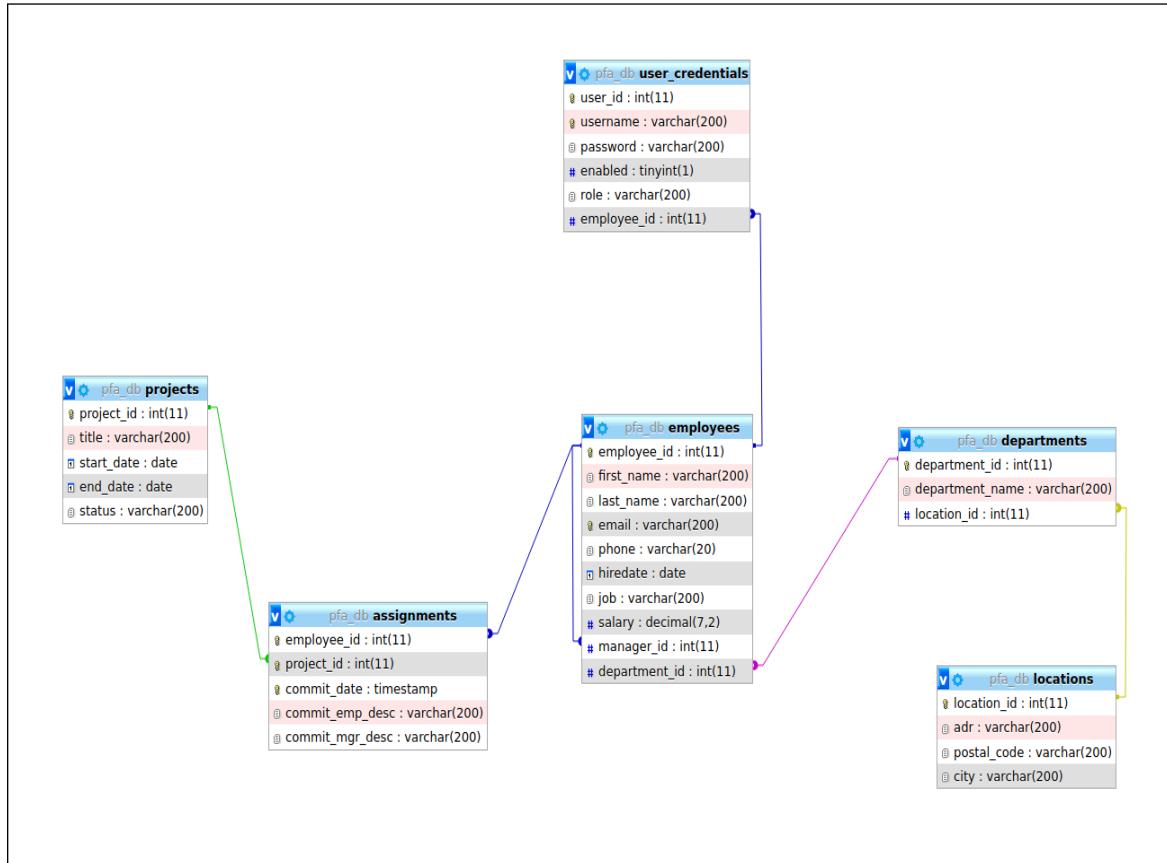

FIGURE 2.24: ERD diagram

### **Conclusion**

Throughout this chapter, we have specified functional requirements and non-functional requirements. Then, we presented the architecture of the system as well as the technologies used for the realization of the project. Then, we prepared our work plan during which we identified the project team, our backlog and the division of our release into sprints. Finally, we presented the general use case diagram and the global class diagram. In the next chapter, we continue with the presentation of our first release.

## 3.1 INTRODUCTION

In this chapter, we deal with the user stories from the first release. First, we present all the specifications, then we present the design phases of its sprints as well as the interfaces relating to the realization of the first release.

### 3.1.1 Sprint backlog:

To fully understand the features of the first release, we reserve this part to present the backlog of the sprints of the latter. The first release is made up of two sprints. The first sprint focuses on the consultation of all the projects assigned to this employee.

Task	Role	Priority
The employee must to authenticate	Employee	M
The employee can list the different affected projects by his manager	Employee	VS

TABLE 3.1: Backlog sprint 1

The second sprint focuses on the tasks concerning the sharing of progress and the visualization of the various commits.

Task	Role	Priority
The employee must share your state advancement following a date of commitment with a description	Employee	S
the employee can visualize his different committment dates for each project that assigned to it.	Employee	VS

TABLE 3.2: Backlog sprint 2

### 3.2 Analysis and Design of Sprint 1:

In this part, we establish the refinements of the different use cases of the first sprint and some design diagrams in order to deliver a description on the different possible scenarios.

#### 3.2.1 Analysis of the case "The employee must authenticate himself":

The system ensures the identity of the user through his login and password.

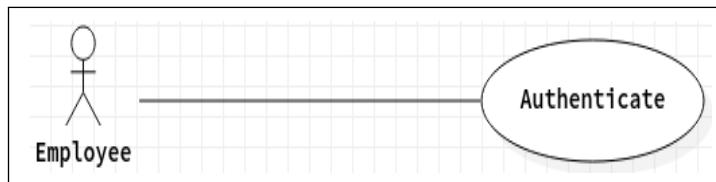

**3.2.2 Refined Employee Authentication Use Case Diagram****must**

FIGURE 3.1: Refined diagram of use cases: The employee must authenticate himself

**3.2.3 Text description**

In this part we present the textual description which contains the use case scenario "Employee must authenticate".

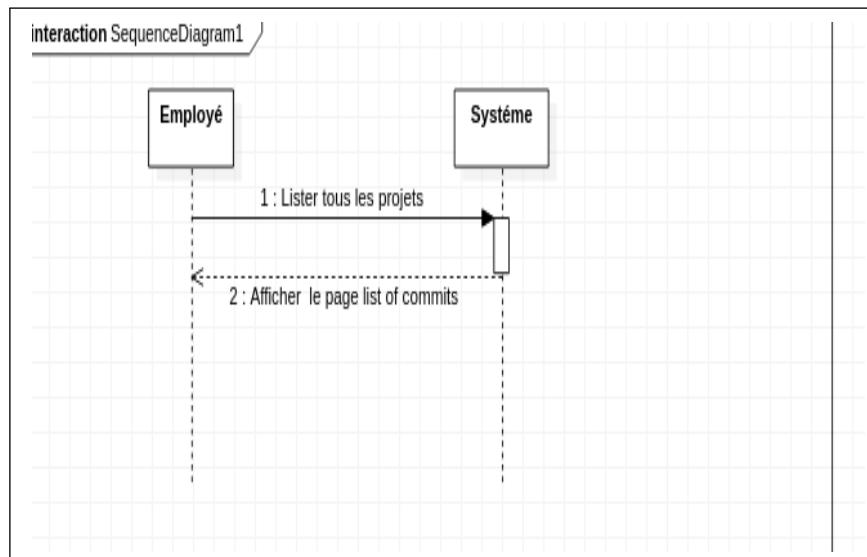

FIGURE 3.12: Sequence diagram of the "employee can view his various commitments" scenario

### 3.5 Realization

In this section, we present the different interfaces relating to the first release.

#### Home page :

The user can go to the home page and click on the button "Are you an Employee?"

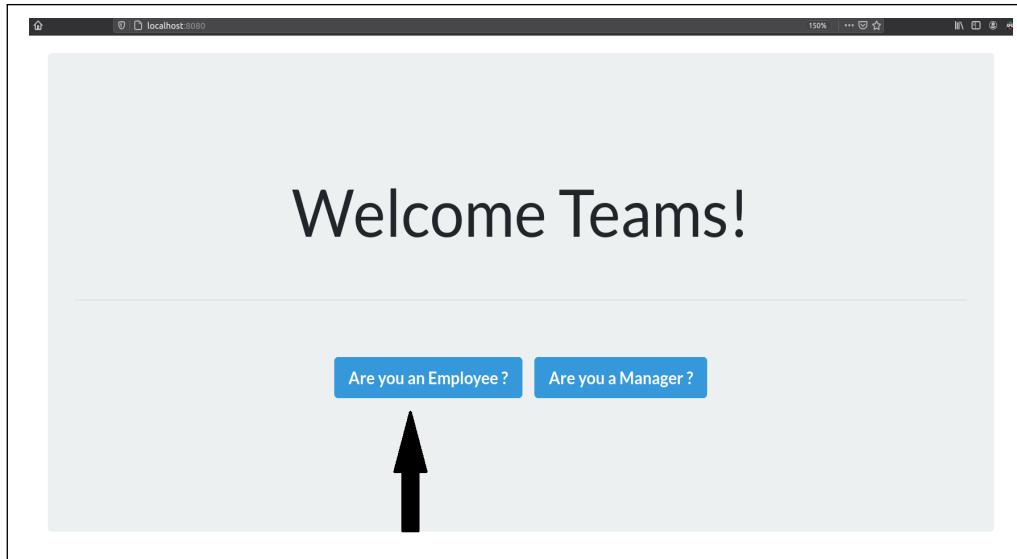

FIGURE 3.13: Home page.

#### Authentication page:

It is the authentication interface which obliges the employee to authenticate himself before using the application, he must therefore enter his login and password.

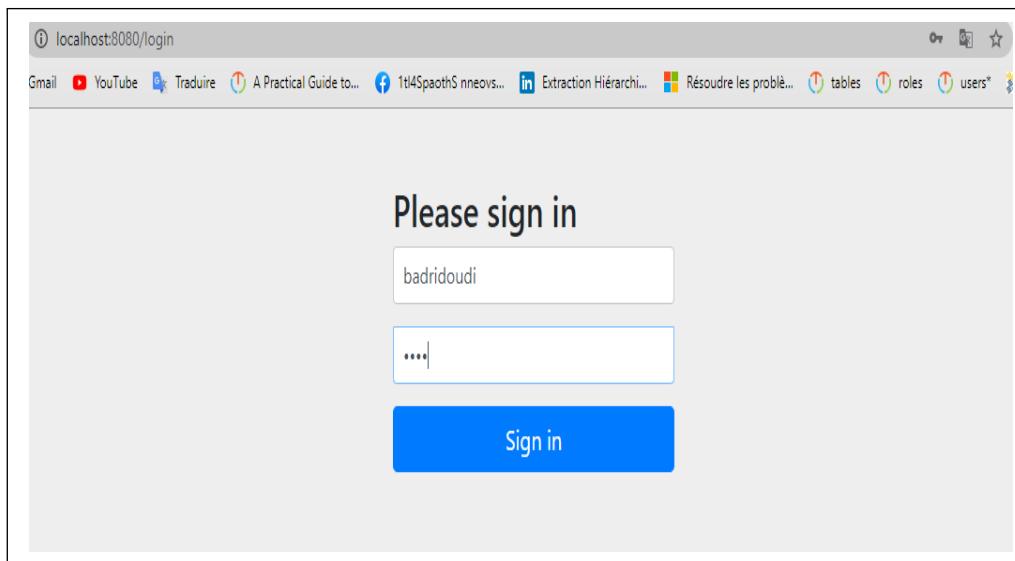

FIGURE 3.14: Authentication

### Display of projects assigned to the current user:

The interface that shows all the projects assigned to the logged in employee.

The screenshot shows a web application interface with a dark header bar containing the text 'Project Tracker', 'Account info', 'My Team members', 'Assigned projects & Commits', 'About', and a 'Logout' link. Below the header is a green success message box that says 'Welcome SELIM HORRI, you're successfully logged in!'. The main content area is a table listing three projects. The table has columns: 'Project title', 'Start Date', 'End Date', 'Project status', and three buttons: '=>SHOW', '=>SHOW', and '=>ADD'. The first project is 'TRANSBSCS' with start date '2020-09-28' and end date '2020-11-04', status 'COMPLETED'. The second project is 'SYNCH\_BSCS\_IMX' with start date '2020-11-26' and end date '-', status 'IN\_PROGRESS'. The third project is 'MACHYA\_RANDONNEE' with start date '-' and end date '-', status 'NOT\_STARTED'. Each project row has three buttons: 'My commits', 'All commits', and 'New commit?'. The table rows have alternating light gray and white backgrounds.

Project title	Start Date	End Date	Project status	=>SHOW	=>SHOW	=>ADD
TRANSBSCS	2020-09-28	2020-11-04	COMPLETED	<a href="#">My commits</a>	<a href="#">All commits</a>	<a href="#">New commit?</a>
SYNCH_BSCS_IMX	2020-11-26	-	IN_PROGRESS	<a href="#">My commits</a>	<a href="#">All commits</a>	<a href="#">New commit?</a>
MACHYA_RANDONNEE	-	-	NOT_STARTED	<a href="#">My commits</a>	<a href="#">All commits</a>	<a href="#">New commit?</a>

FIGURE 3.15: Display of projects assigned to the user

### Interface display add a commit:

The employee can add a commit in a project to which he is assigned.

A screenshot of a web browser displaying a form titled "Add Commit". The URL in the address bar is "localhost:8080/app/employees/employee-add-commit?projectId=2". The page has a dark header with navigation links: "Project Tracker", "Account info", "My Team members", "Assigned projects & Commits", "About", and a "Logout" link. The main content area contains three input fields: "Username" (value: "selimhorri"), "Project title" (value: "SYNCH\_BSIS\_IMX"), and "Commit Description" (value: "generate new XML file for CRMIMX2"). Below these fields is a green "Commit" button.

FIGURE 3.16: Interface display add a commit

### Confirmation message

A confirmation message following a commit.

A screenshot of a web browser displaying a form titled "Add Commit". The URL in the address bar is "localhost:8080/app/employees/employee-add-commit". The page has a dark header with navigation links: "Project Tracker", "Account info", "My Team members", "Assigned projects & Commits", "About", and a "Logout" link. The main content area contains three input fields: "Username" (value: "selimhorri"), "Project title" (value: "SYNCH\_BSIS\_IMX"), and "Commit Description" (value: "Enter your new Commit Description..."). At the bottom of the form, there is a green message box containing the text "You've created a new COMMIT at: 2020-12-14T21:41:06.718985". Below this message is a green "Commit" button.

FIGURE 3.17: Display of the confirmation message following a commit

**Log trace when adding a commit:**

```
2020-12-17 15:19:49.241 INFO 25045 --- [nio-8080-exec-6] c.p.pack.controllers.EmployeeController : COMMIT created successfully at :

2020-12-17 15:19:53.220 INFO 25045 --- [nio-8080-exec-6] c.p.pack.controllers.EmployeeController : SMS successfully sent to 22125144
```

FIGURE 3.18: commit log

**Receiving an email during a commit:**

During addition of a commit, the system send a E-mail To "Springabctxyzboot@gmail.com"

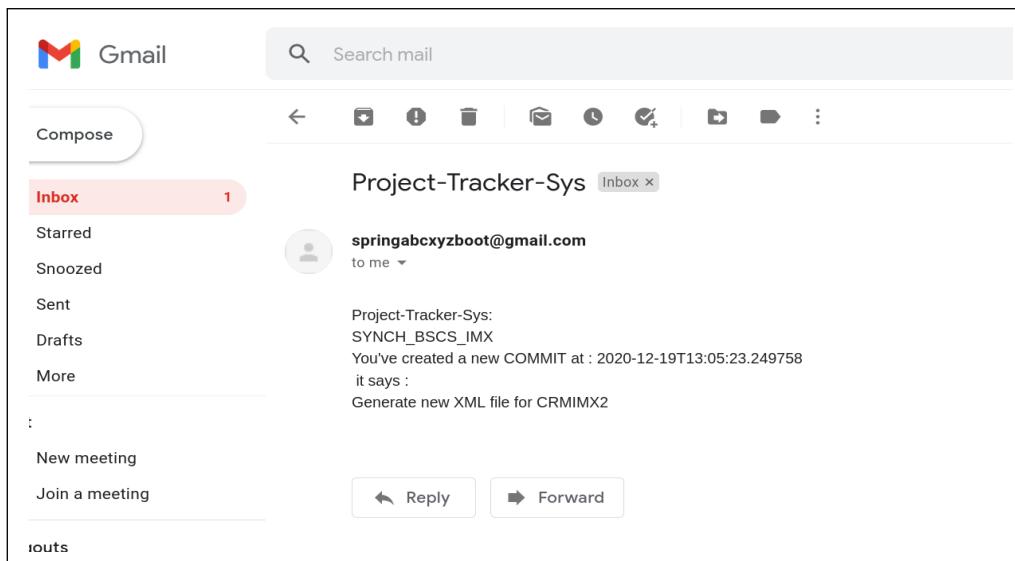

FIGURE 3.19: Receiving an email during a commit

### Receipt of an SMS during a commit:

When adding a commit, the system will send an SMS.

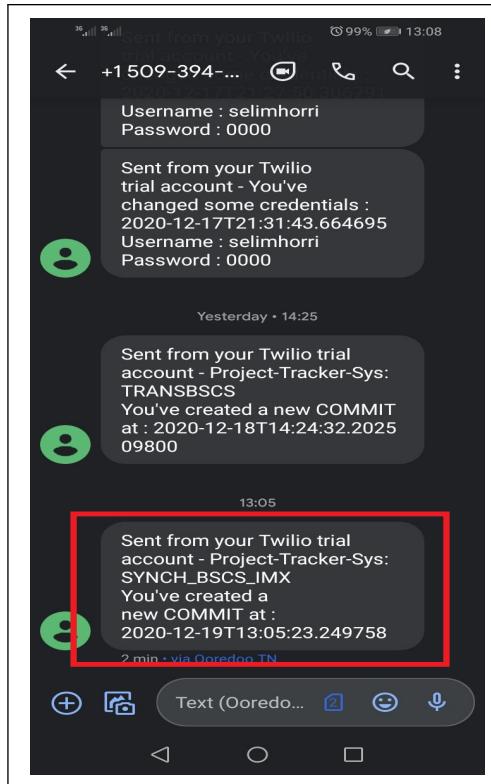

FIGURE 3.20: Receipt of an SMS during a commit

### Display of a new commit:

This interface shows the previously added commit.

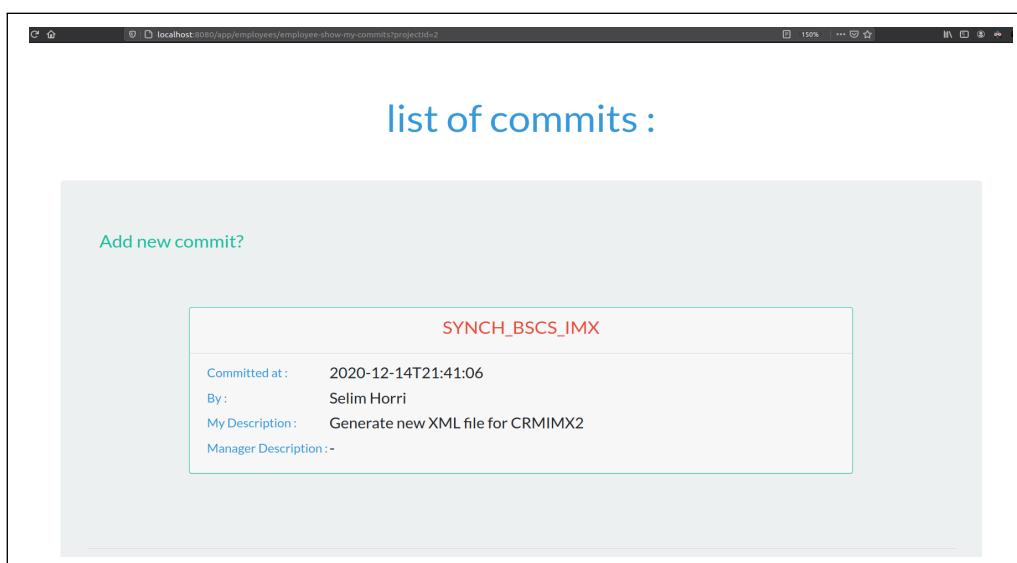

FIGURE 3.21: Display of a new commit

### Display of all commits:

This page shows all the commits of the employee as well as those of his colleagues.

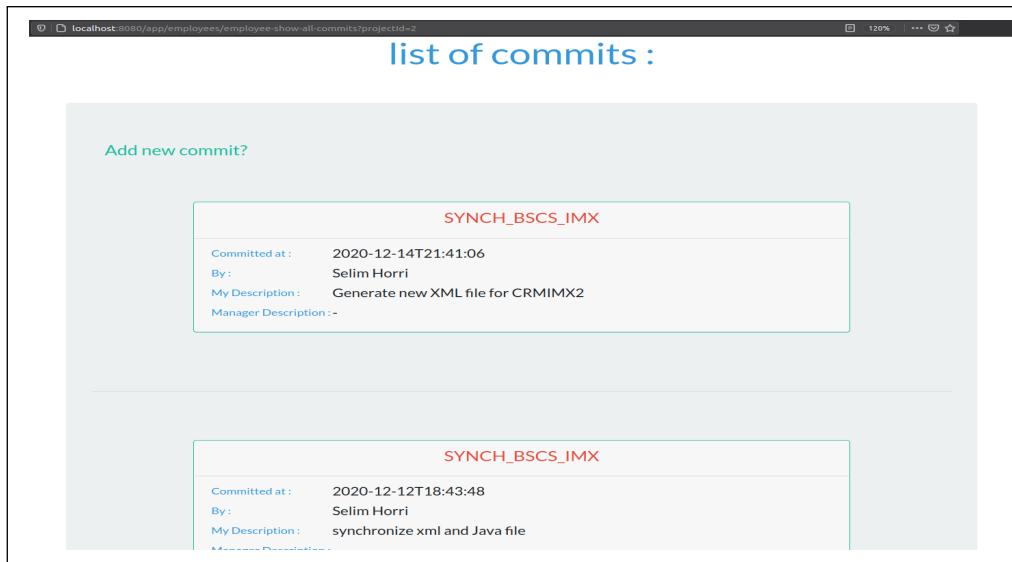

FIGURE 3.22: Display of all commits

### 3.6 Conclusion

Throughout this chapter, we have presented the Sprint Backlog from the first release. Then, we put the accent on its specification and its design then its realization.

## 4.1 INTRODUCTION

In this chapter, we deal with the user stories of the second release. First, we present the organization of the sprints for this release as well as all the specifications, then we present the design phases of its sprints as well as the interfaces relating to their implementation.

## 4.2 Sprint backlog

To fully understand the features of the second release, we are going to reserve this part to present the backlog of the sprints of the latter. the first sprint focuses affected. on the authentication and consultation of the projects

Task	Role	Priority
The manager must to authenticate	Manager	M
The manager can consult the affected projects	Manager	VS

TABLE 4.1: Backlog sprint 1

The second sprint focuses on reviewing progress and monitors projects.

Task	Role	Priority
The manager must consult the state advancement	Manager	M
The manager follow up	Manager	VS

TABLE 4.2: Backlog sprint 2

So the third sprint concerns the creation, assignment and management of a project.

Task	Role	Priority
The manager assign a project	Manager	VS
The manager manages a project	Manager	VS

TABLE 4.3: Backlog sprint 3

### 4.3 Analysis and Design of Sprint 1:

In this part, we establish the refinements of the different use cases of the first sprint and some design diagrams in order to deliver a description on the different possible scenarios.

#### 4.3.1 Analysis of the "authentication" case:

The system ensures the identity of the user through his login and password.

#### 4.3.2 Refined "Authentication" Use Case Diagram

## 4.6 Realization

In this section, we present the different interfaces relating to the second release.

### Home page :

The user can go to the home page and click on the "Are you a Manager?" Button.

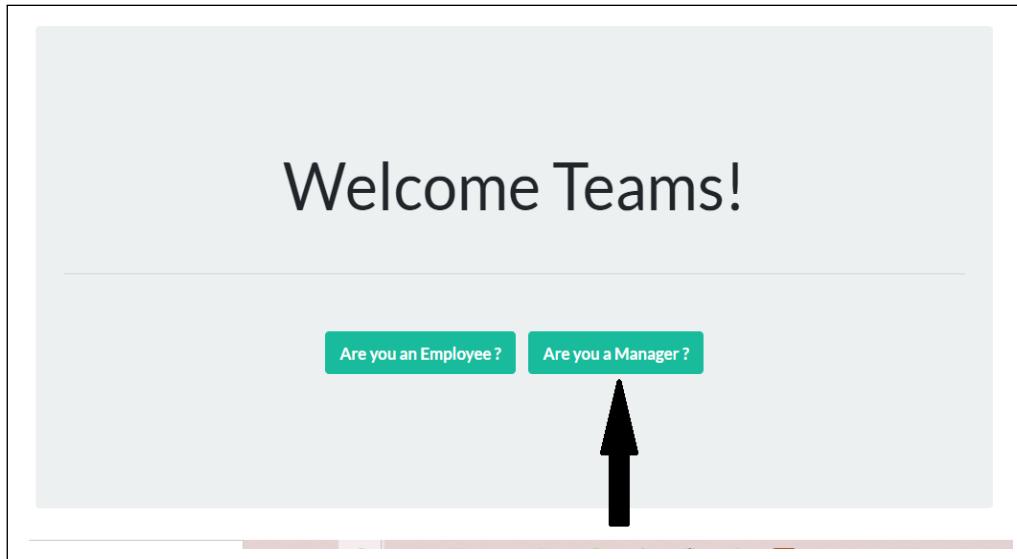

FIGURE 4.19: Home page.

### Authentication page:

It is the authentication interface which obliges the manager to authenticate himself before using the application, he must therefore enter his login and password.

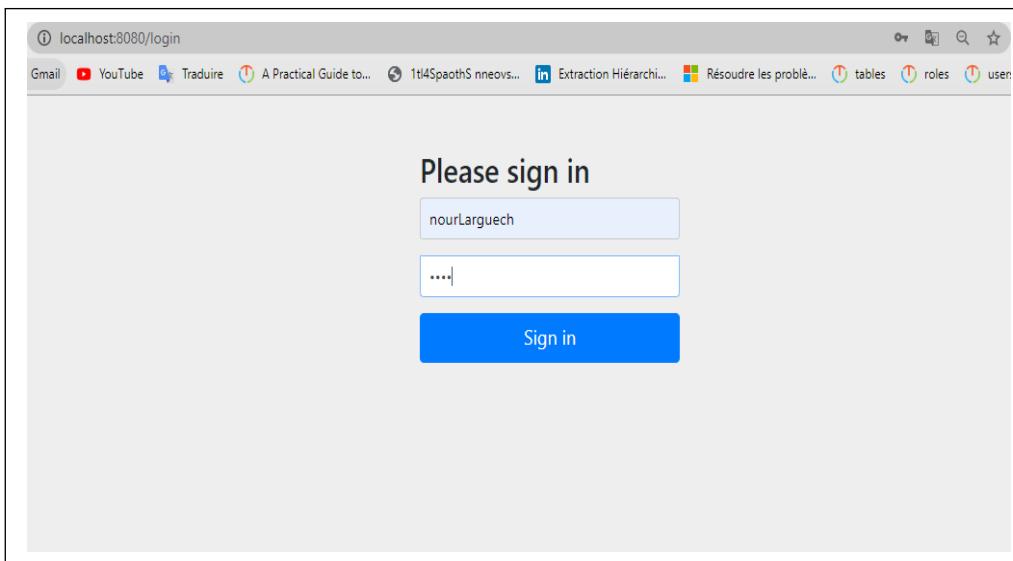

FIGURE 4.20: Authentication page.

### Manager home page.

The interface that shows all the projects created by the manager.

A screenshot of a web browser showing a project management interface. The URL in the address bar is "localhost:8080/app/managers/manager-index". The top navigation bar includes links for "Project Tracker", "Account info", "My Team members", "My projects", and "About", along with a "Logout" link. A green success message box says "Welcome Nour Larguech, you're successfully logged in!". Below this, there is a table listing three projects:

Project title	Start Date	End Date	Project status	Show Commits	Assign employees	Edit Project	Delete Project
MACHYA_RANDONNEE	2021-01-29	2021-04-30	NOT_STARTED	<a href="#">Commits</a>	<a href="#">Assign</a>	<a href="#">Edit</a>	<a href="#">Delete</a>
COMMISION_AUTOMATION	2020-06-01	2021-03-02	IN_PROGRESS	<a href="#">Commits</a>	<a href="#">Assign</a>	<a href="#">Edit</a>	<a href="#">Delete</a>
GREENPLUME_UPGRADE	2020-11-02	2021-05-01	IN_PROGRESS	<a href="#">Commits</a>	<a href="#">Assign</a>	<a href="#">Edit</a>	<a href="#">Delete</a>

FIGURE 4.21: Manager home page.

### Display of a commit:

The manager must click on one of the "commit" button as specified below to display a project

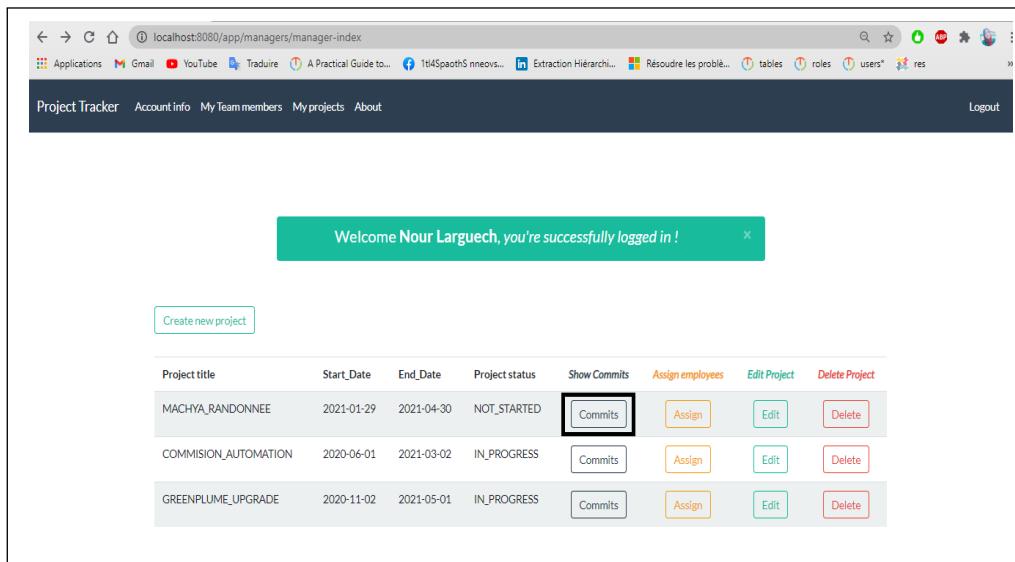

FIGURE 4.22: Display of a commit.

### Display of a commit:

This interface demonstrates commits created by employees.

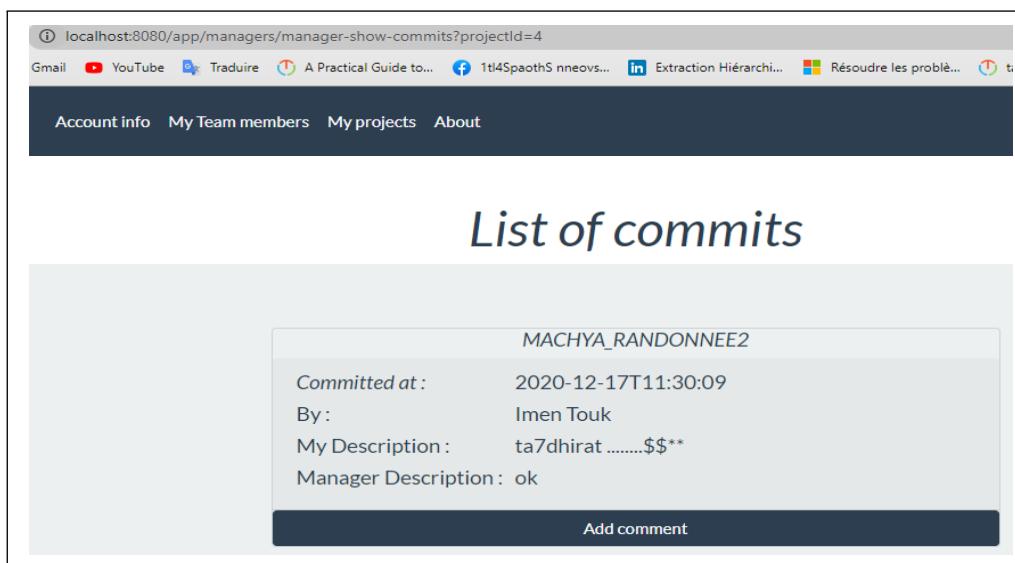

FIGURE 4.23: Display of a commit.

### Delete a project:

In order to delete a project, the manager must click on "Delete".

The screenshot shows a web browser window for 'localhost:8080/app/managers/manager-index'. At the top, there's a navigation bar with links like 'Project Tracker', 'Account info', 'My Team members', 'My projects', and 'About'. A green success message box says 'Welcome Nour Larguech, you're successfully logged in !'. Below the message is a table with three rows of project data. Each row has columns for 'Project title', 'Start Date', 'End Date', 'Project status', and several action buttons: 'Show Commits', 'Assign employees', 'Edit Project', and 'Delete Project'. The 'Delete Project' button for the first row is highlighted with a red box.

Project title	Start Date	End Date	Project status	Show Commits	Assign employees	Edit Project	Delete Project
MACHYA_RANDONNEE	2021-01-29	2021-04-30	NOT_STARTED	Commits	Assign	Edit	<b>Delete</b>
COMMISION_AUTOMATION	2020-06-01	2021-03-02	IN_PROGRESS	Commits	Assign	Edit	Delete
GREENPLUME_UPGRADE	2020-11-02	2021-05-01	IN_PROGRESS	Commits	Assign	Edit	Delete

FIGURE 4.24: Delete a project.

### Confirmation message:

After clicking on the delete button, a confirmation message is displayed to the manager to confirm the action.

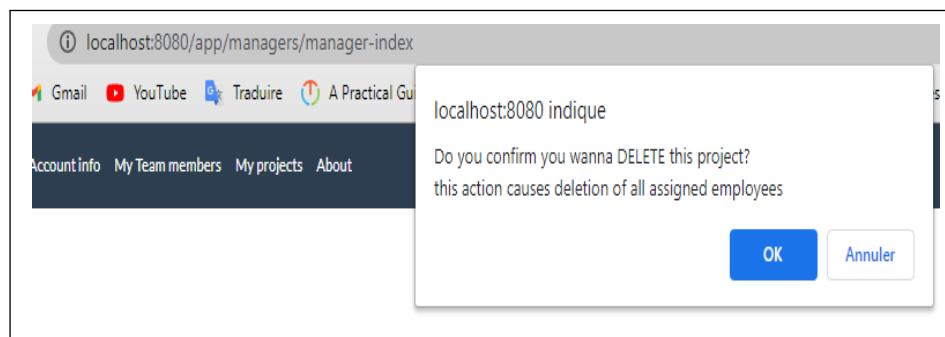

FIGURE 4.25: Confirmation message.

### **Creation of a new project:**

To create a project, the manager must click on the button "Create new project"

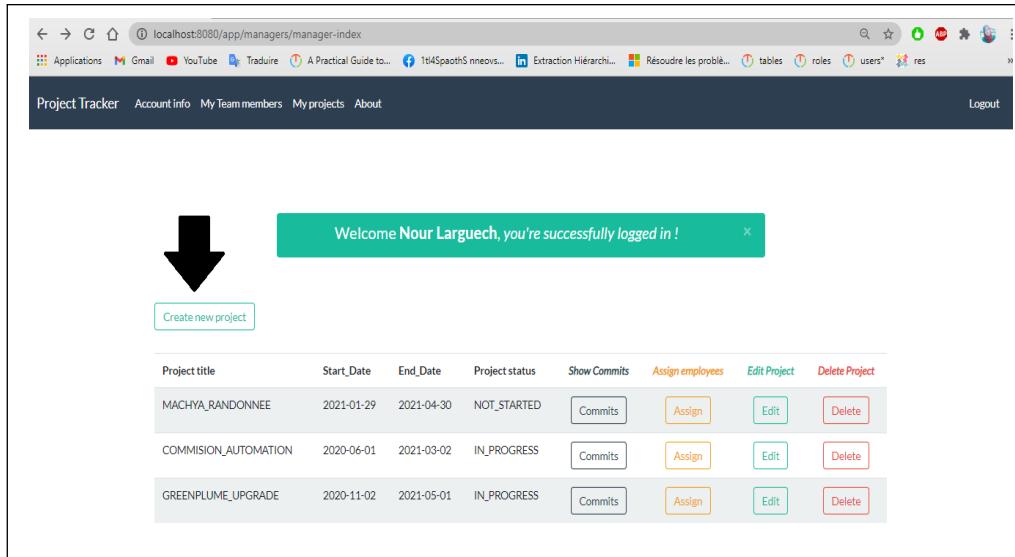

FIGURE 4.26: Creation of a new project.

### **Creation of a new project:**

The manager is invited to fill in the different fields of a project and assign it to one or more employees.

FIGURE 4.27: Creation of a new project.

### Confirmation message display:

A confirmation message indicates the creation of the project.

localhost:8080/app/managers/manager-add-project

Username: nourlarguech

Project title: big data

Start Date: 01/01/2021

End Date: 28/03/2021

Project status: NOT\_STARTED

Assign to:

project big data created successfully

Create Project

FIGURE 4.28: Display of confirmation message.

### Modify a project:

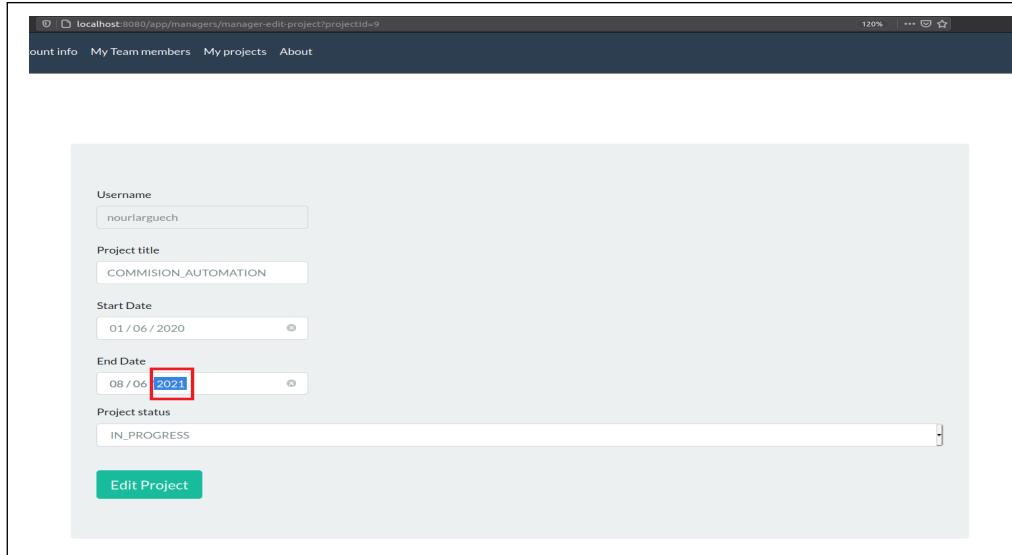

In order to modify a project, the manager must click on the "Edit" button.

Project title	Start Date	End Date	Project status	Show Commits	Assign employees	Edit Project	Delete Project
MACHYA_RANDONNEE	2021-01-29	2021-04-30	NOT_STARTED	Commits	Assign	Edit	Delete
COMMISSION_AUTOMATION	2020-06-01	2021-03-02	IN_PROGRESS	Commits	Assign	Edit	Delete
GREENPLUME_UPGRADE	2020-11-02	2021-05-01	IN_PROGRESS	Commits	Assign	Edit	Delete

FIGURE 4.29: Modify a project.

### Modify the end date of a project:

The manager can modify any field.

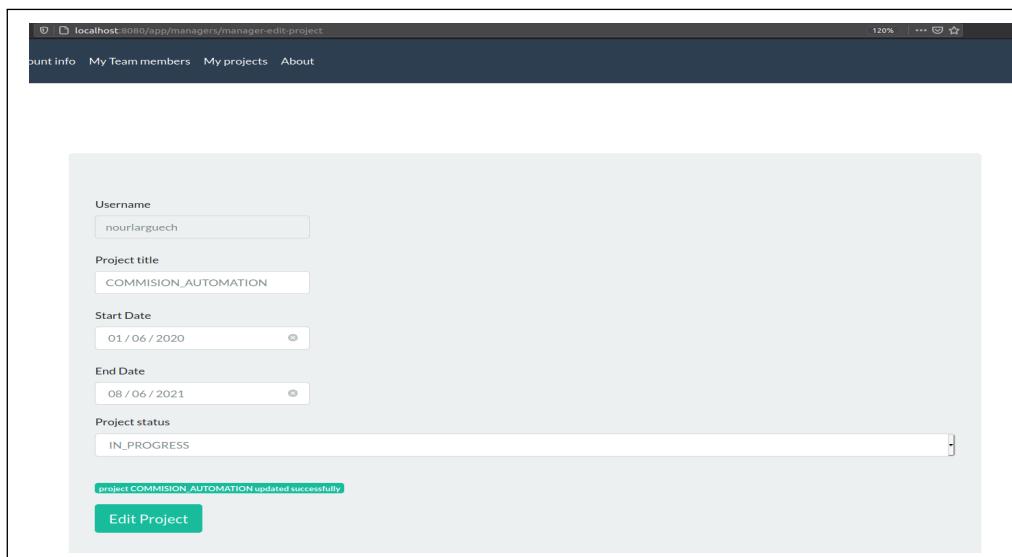

A screenshot of a web application interface titled "localhost:8080/app/managers/manager/edit-project?projectId=9". The page has a dark header with navigation links: "Account info", "My Team members", "My projects", and "About". The main content area contains a form for editing a project. The form fields are: "Username" (nourlarguech), "Project title" (COMMISSION\_AUTOMATION), "Start Date" (01 / 06 / 2020), "End Date" (08 / 06 / 2021, with the year "2021" highlighted by a red box), and "Project status" (IN\_PROGRESS). A green "Edit Project" button is at the bottom. The URL in the address bar is "localhost:8080/app/managers/manager/edit-project?projectId=9".

FIGURE 4.30: Modify the end date of a project.

### Confirmation message display:

A confirmation message indicating the modification of the project.

A screenshot of a web application interface titled "localhost:8080/app/managers/manager/edit-project". The page has a dark header with navigation links: "Account info", "My Team members", "My projects", and "About". The main content area contains a form for editing a project. The form fields are: "Username" (nourlarguech), "Project title" (COMMISSION\_AUTOMATION), "Start Date" (01 / 06 / 2020), "End Date" (08 / 06 / 2021), and "Project status" (IN\_PROGRESS). Below the form, a green box displays the message "project COMMISSION\_AUTOMATION updated successfully". A green "Edit Project" button is at the bottom. The URL in the address bar is "localhost:8080/app/managers/manager/edit-project".

FIGURE 4.31: Display of confirmation message.

### Assign a project to an employee:

The manager can assign one or more members to a project.

User Name  
nourlarguech

Project Title  
MACHYA\_RANDONNEE

Those employees are not assigned, do you want to assign them ?  
 Mouna Chaouachi

Assign

## 5.1 INTRODUCTION

In this chapter, we deal with the user stories of the third release. First, we present all the specifications, then we present the design phases of its sprints as well as the interfaces relating to the realization of the third release.

### 5.1.1 Sprint backlog:

To fully understand the features of the third release, we are going to reserve this part to present the backlog of the sprints of the latter. The first sprint focuses on employee management.

Task	Role	Priority
The administrator must manage employees	Administrator	M

TABLE 5.1: Backlog sprint 1

The second sprint focuses on department management.

Task	Role	Priority
The administrator must manage departments	Administrator	S

TABLE 5.2: Backlog sprint 2

The third sprint focuses on rental management.

Task	Role	Priority
The administrator must manage rentals	Administrator	S

TABLE 5.3: Backlog sprint 3

## 5.2 Analysis and Design of sprint 1:

In this part, we establish the refinements of the different use cases of the first sprint and some design diagrams in order to deliver a description on the different possible scenarios.

### 5.2.1 Analysis of the "Managing employees" case:

The system ensures the identity of the user through his login and password.

### 5.2.2 Refined "Manage Employees" Use Case Diagram

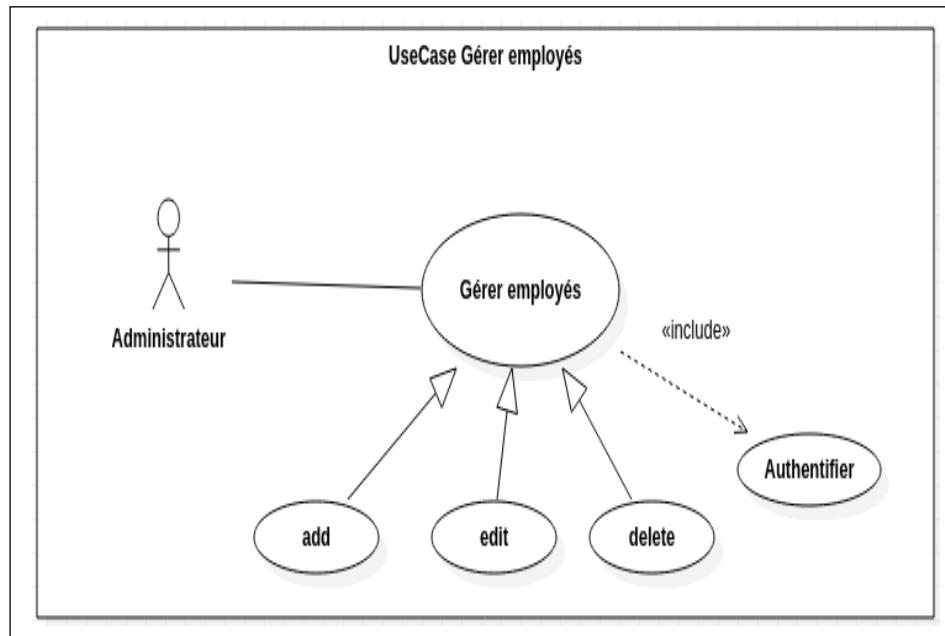

FIGURE 5.1: Refined Use Case Diagram: Manage Employees

### 5.2.3 Text description

In this part we present the textual description that contains the "Manage Employees" use case scenarios.

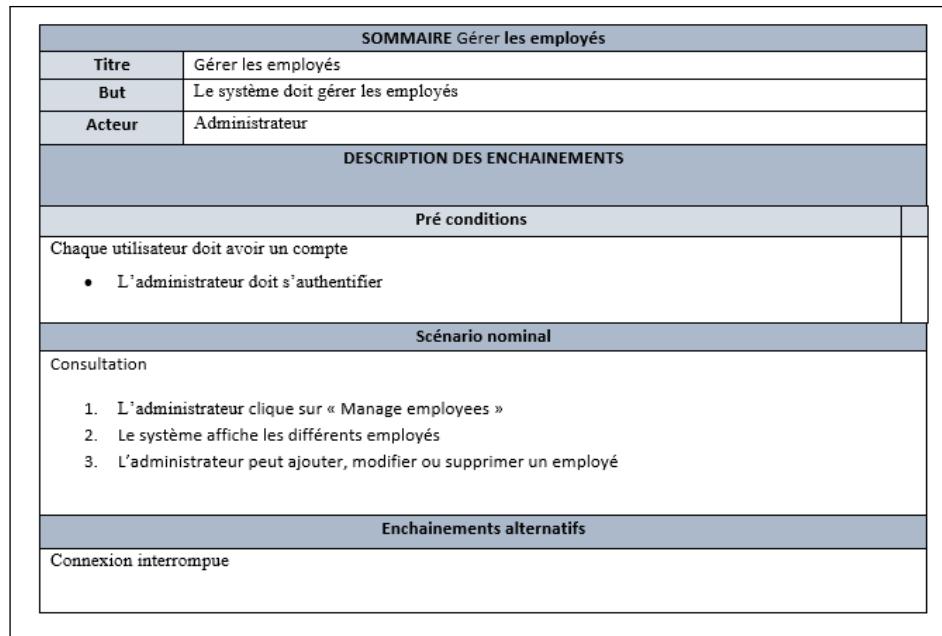

FIGURE 5.2: Refined Use Case Diagram: Manage Employees

#### 5.2.4 Sequence diagram of the "Manage employees" scenario

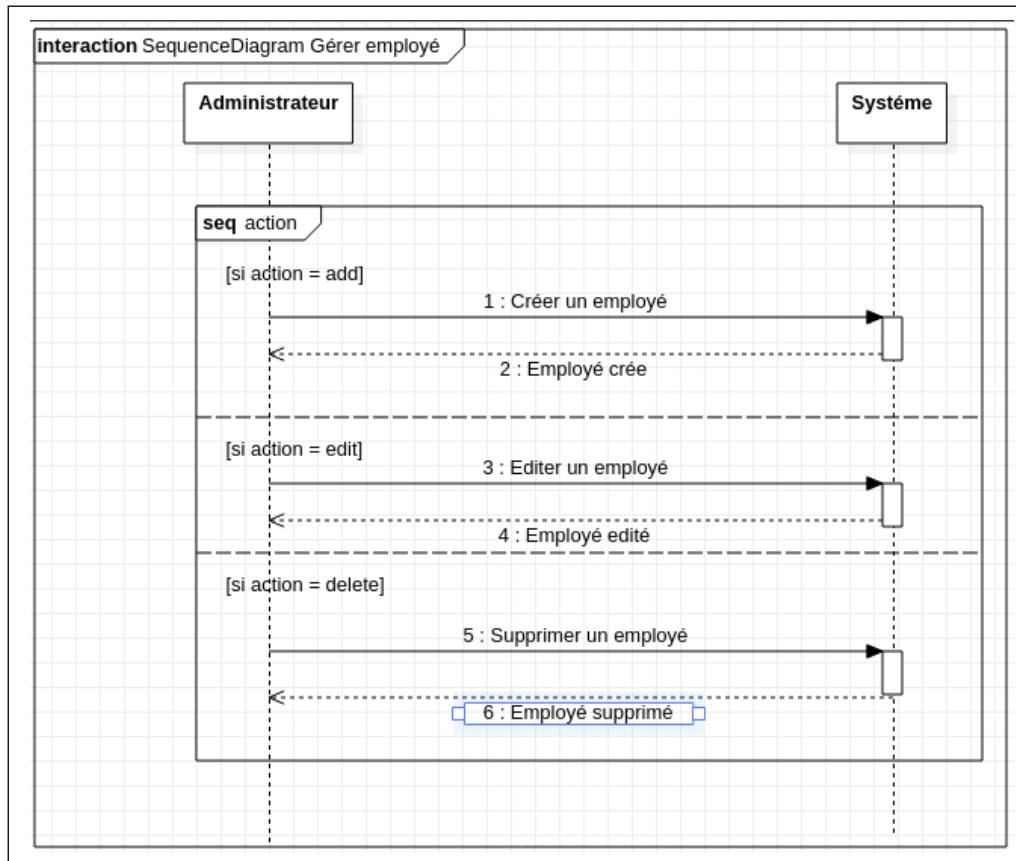

FIGURE 5.3: Sequence diagram of the "Manage employees" scenario

## 5.3 Analysis and Design of Sprint 2:

In this part, we establish the refinements of the different use cases of the first sprint and some design diagrams in order to deliver a description on the different possible scenarios.

### 5.3.1 Analysis of the "Manage departments" case:

The system ensures the identity of the user through his login and password.

### 5.3.2 Refined "Manage Departments" Use Case Diagram

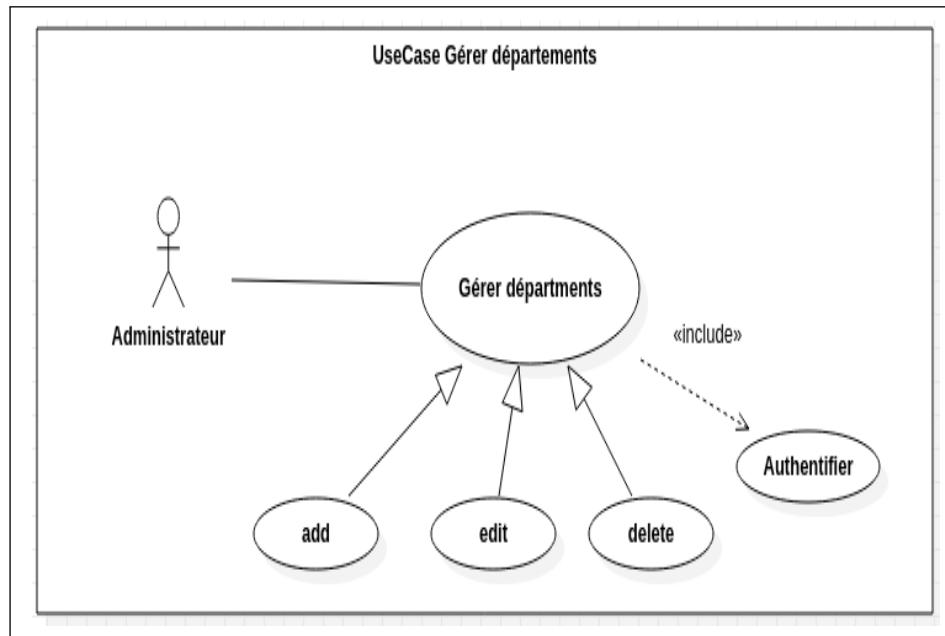

FIGURE 5.4: Refined Use Case Diagram: Manage Departments

### 5.3.3 Text description

In this part we present the textual description which contains the "Manage all employees" use case scenarios.

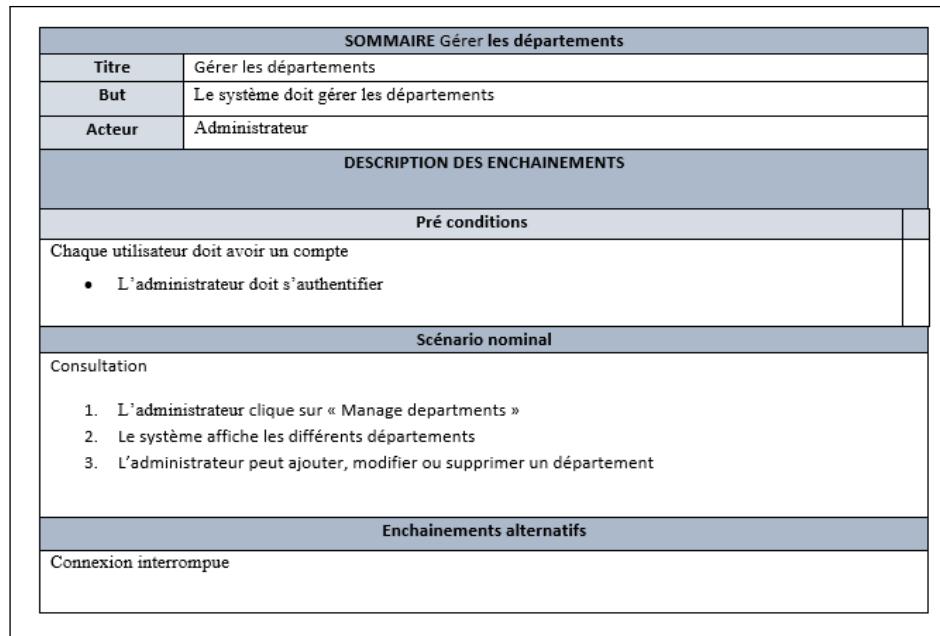

FIGURE 5.5: Refined Use Case Diagram: Manage Departments

### 5.3.4 Sequence diagram of the "Manage departments" scenario

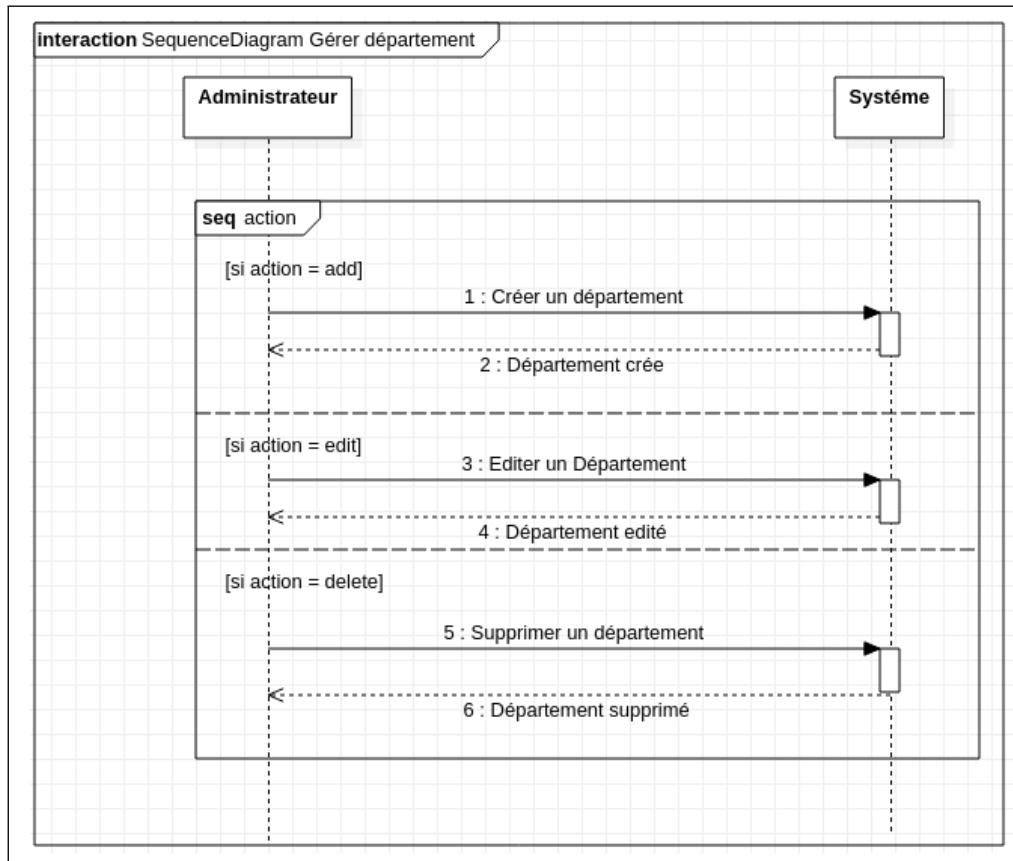

FIGURE 5.6: Sequence diagram of the "Manage departments" scenario

## 5.4 Analysis and Design of Sprint 3:

In this part, we establish the refinements of the different use cases of the first sprint and some design diagrams in order to deliver a description on the different possible scenarios.

### 5.4.1 Analysis of the "Manage rentals" case:

The system ensures the identity of the user through his login and password.

### 5.4.2 Refined "Manage Rentals" Use Case Diagram

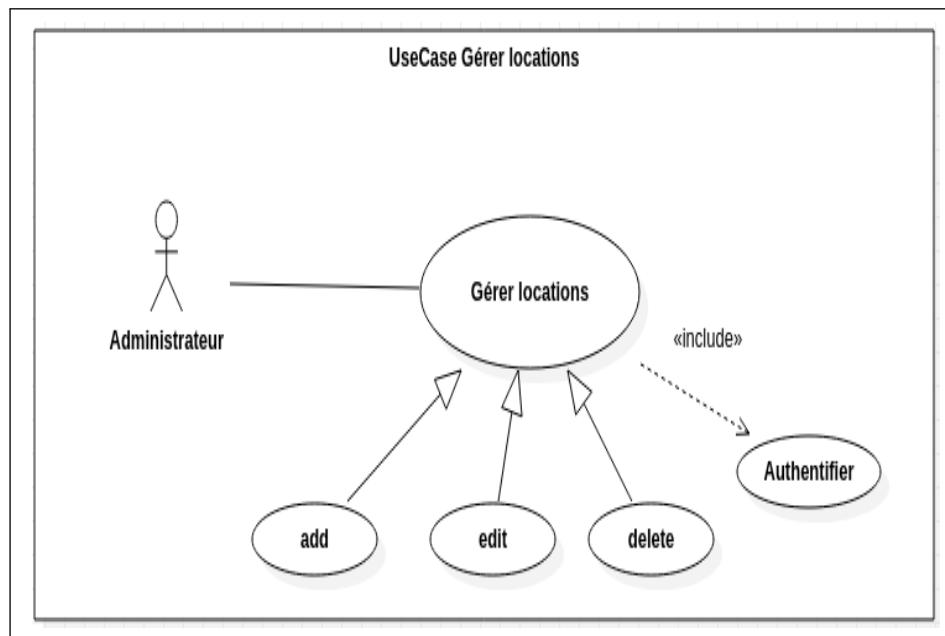

FIGURE 5.7: Refined Use Case Diagram: Manage Rentals

### 5.4.3 Text description

In this part we present the textual description that contains the "Manage Rentals" use case scenarios.

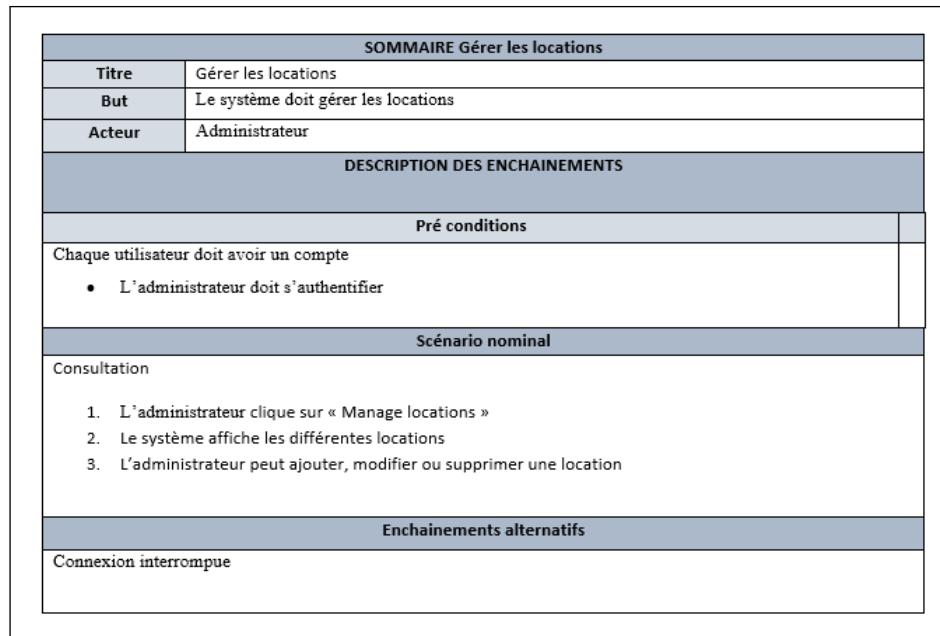

FIGURE 5.8: Refined Use Case Diagram: Manage Rentals

#### 5.4.4 Sequence diagram of the "Manage tenancies" scenario

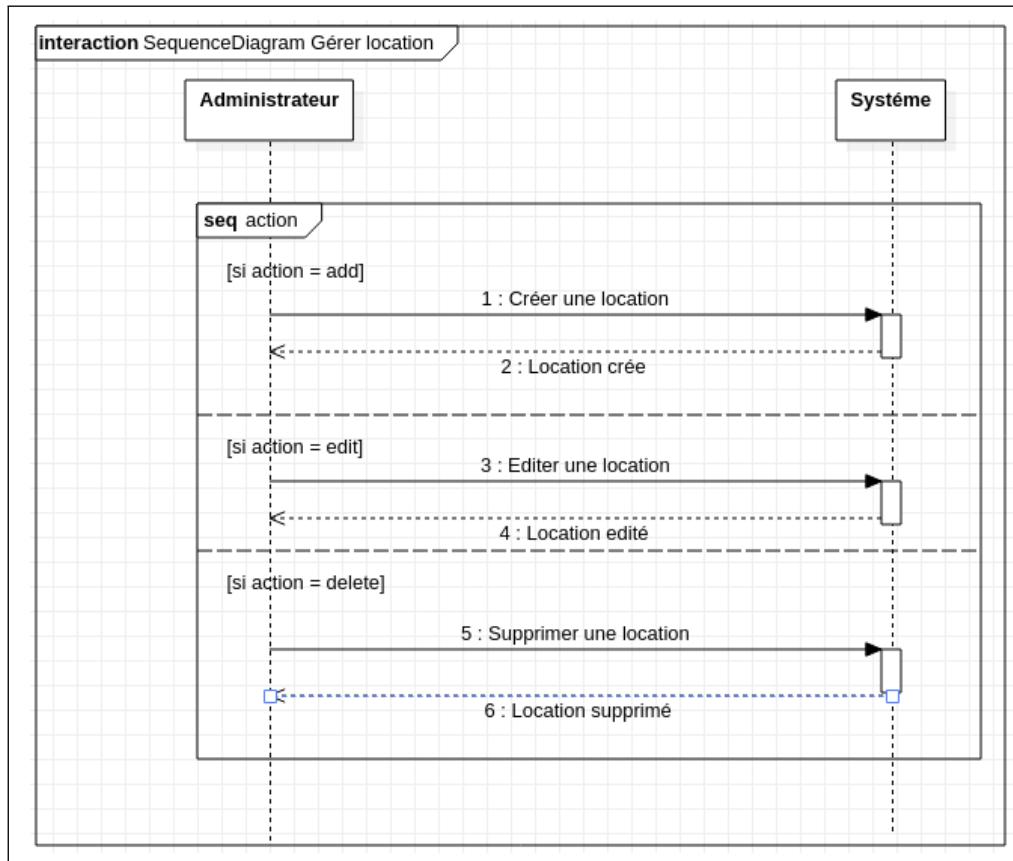

FIGURE 5.9: Sequence diagram of the "Manage rentals" scenario

## 5.5 Realization

In this section, we present the different interfaces relating to the third release.

### Home page :

The user can go to the home page and click on the button "Are you an admin?"

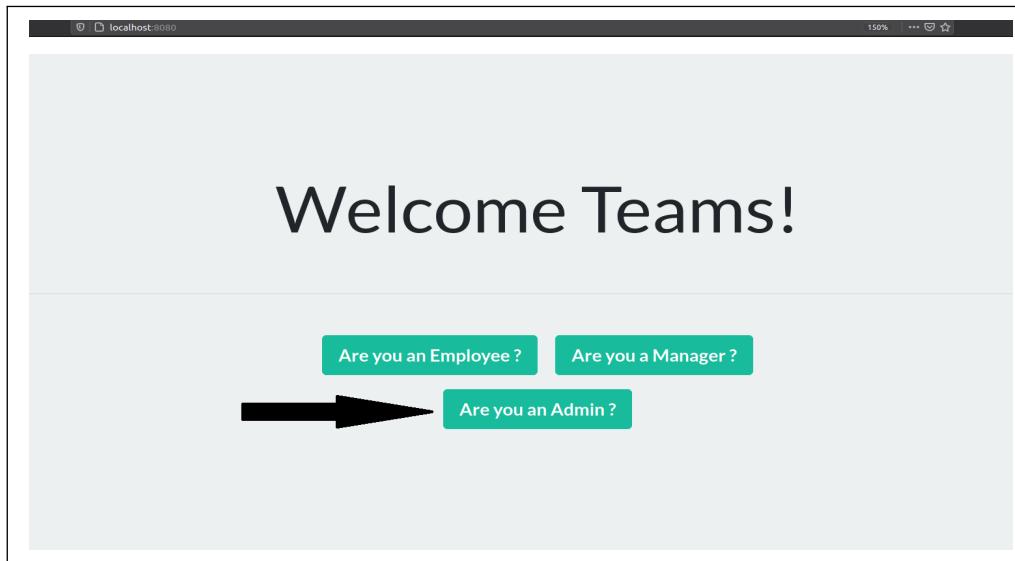

FIGURE 5.10: Home page.

### Home page :

The administrator can manage departments, locations or employees.

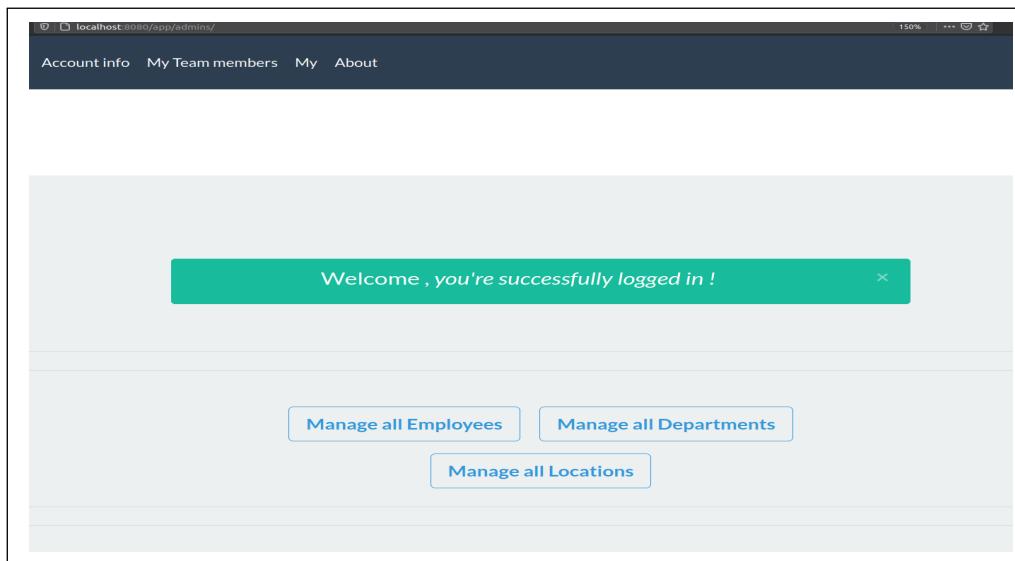

FIGURE 5.11: Home page.

### List of rentals:

The interface that shows the locations and the actions to be taken for each location.

A screenshot of a web browser displaying a list of locations. The title bar shows the URL as 'localhost:8080/app/admins/locations/admin-locations-list'. The page has a dark header with links for 'Account info', 'My Team members', 'My', and 'About', and a 'Logout' button. Below the header, the text 'Add a new location' is displayed. A table lists two locations:

Address	Postal Code	City	Edit location	Delete location
RUE DE LA BOURSE	2016	LAC2	<button>Edit</button>	<button>Delete</button>
RUE DE BLA BLA	2016	CHARGUIA	<button>Edit</button>	<button>Delete</button>

FIGURE 5.12: List of rentals.

### Add a location:

The administrator clicks on the button "Add new location" then fill in the information of the location to add. a message returned by the system confirms the addition.

A screenshot of a web browser displaying a form to add a new location. The title bar shows the URL as 'localhost:8080/app/admins/locations/admin-locations-add'. The page has a dark header with links for 'Account info', 'My Team members', 'My', and 'About'. Below the header, there are three input fields: 'Address' (rue imem ghazali), 'Postal Code' (2016), and 'City' (Byrsa). At the bottom of the form, a green message box displays 'This location has been created successfully'. A large green 'Add Location' button is at the bottom right.

FIGURE 5.13: Add a location.

### Modify a rental:

The administrator clicks on the "Edit" button then modifies the information of a location. a message returned by the system confirms the modification action.

A screenshot of a web browser displaying a project editing interface. The URL in the address bar is `localhost:8080/app/managers/manager/edit-project`. The page has a dark header with navigation links: Account info, My Team members, My projects, and About. Below the header, there is a form with the following fields:

- Username: nourlarguech
- Project title: COMMISSION\_AUTOMATION
- Start Date: 01 / 06 / 2020
- End Date: 08 / 06 / 2021
- Project status: IN\_PROGRESS

Below the form, a success message reads: "project COMMISSION\_AUTOMATION updated successfully". At the bottom of the form is a green "Edit Project" button.

FIGURE 5.14: Modify a rental.

### Delete a rental:

The administrator clicks on the "Delete" button, a pop-up is displayed for confirmation.

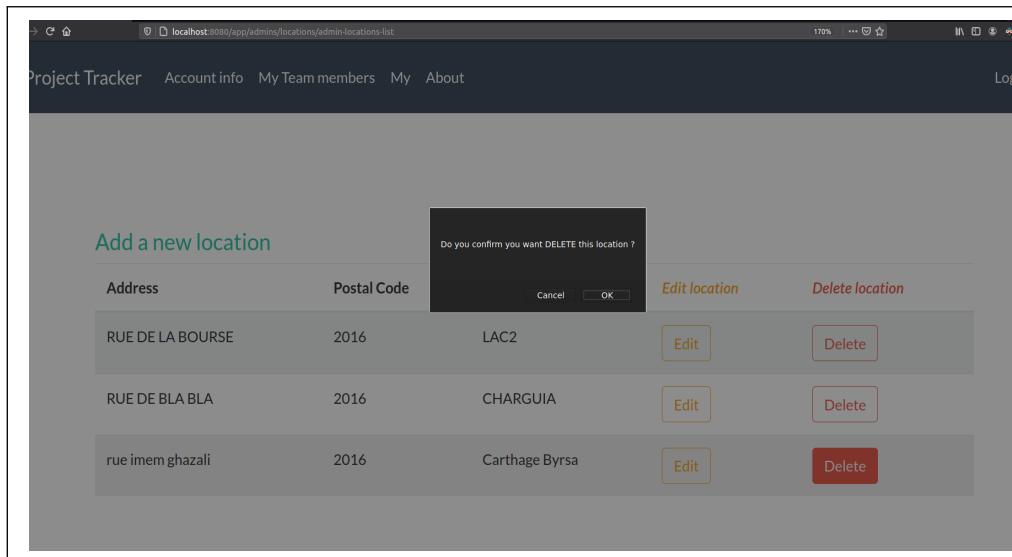

FIGURE 5.15: Delete a rental.

**List of departments:**

The interface that shows the departments and the actions to be done for each department.

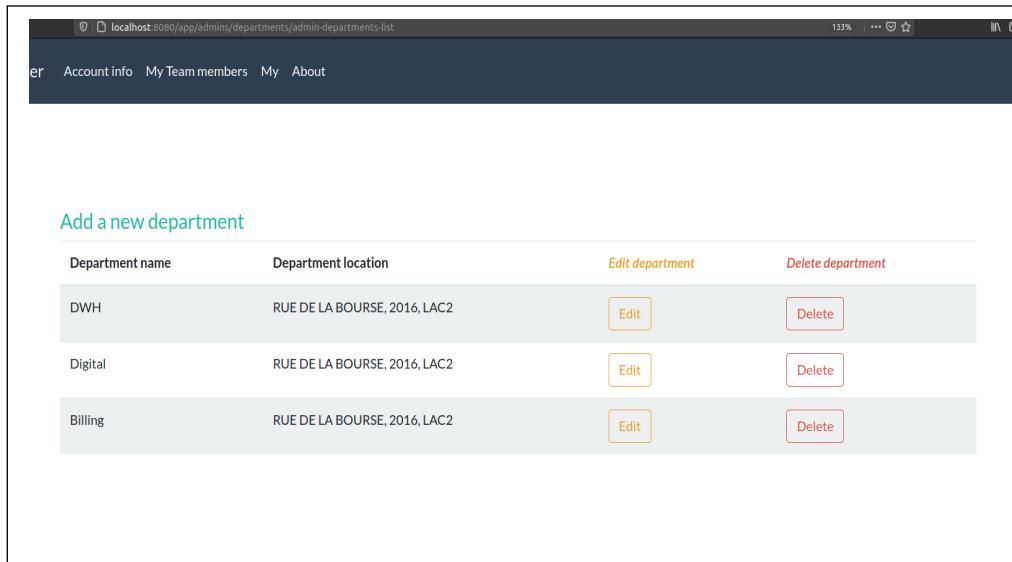

FIGURE 5.16: Home page.

**Add a department:**

The administrator clicks on the button "Add new department" then fill in the information of the department to add. a message returned by the system confirms the addition.

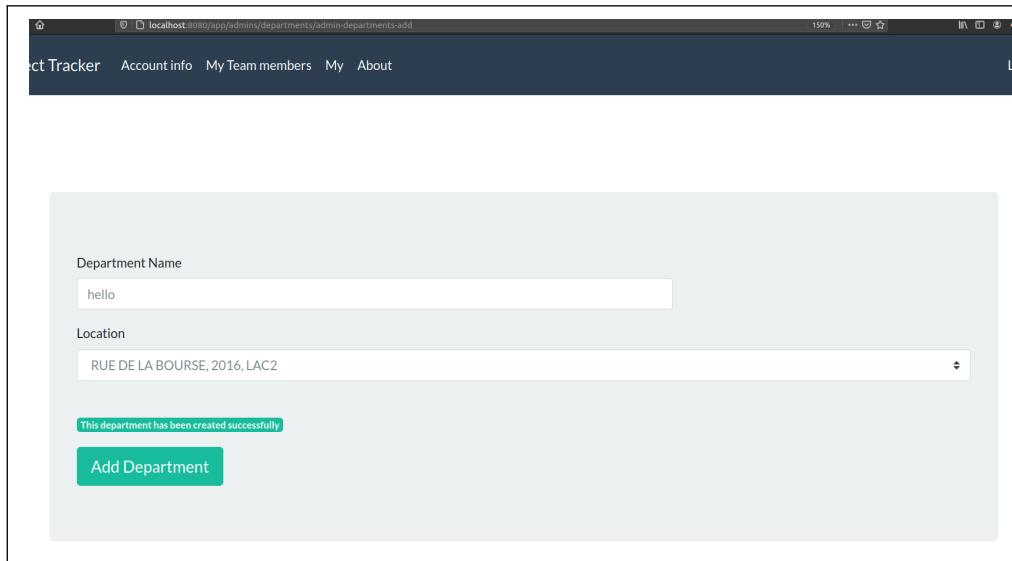

FIGURE 5.17: Add a department.

### Modify a department:

The administrator clicks on the "Edit" button then modifies the information of a department. A message returned by the system confirms the modification action.

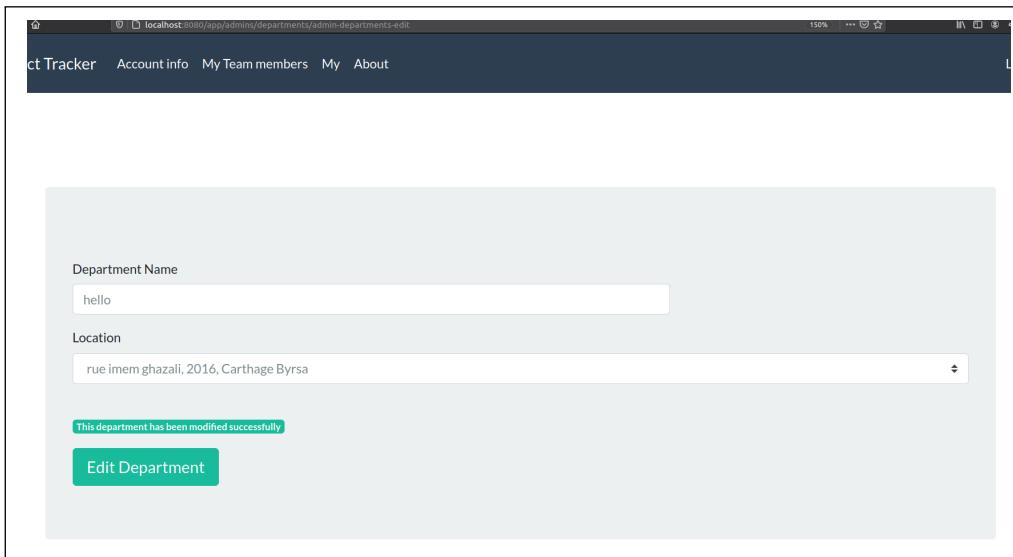

FIGURE 5.18: Modify a department.

### Delete a department:

The administrator clicks on the "Delete" button, a pop-up is displayed for confirmation.

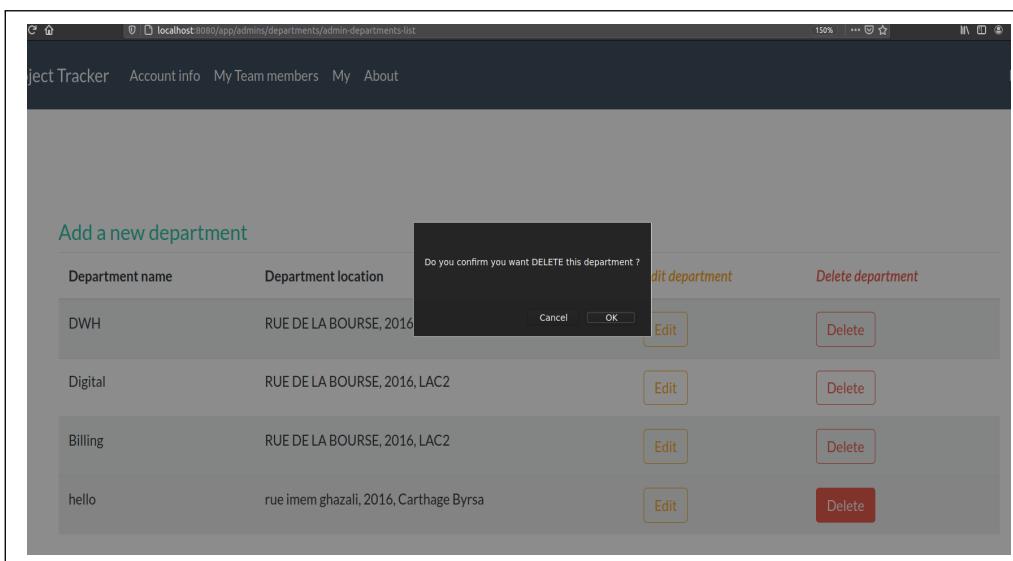

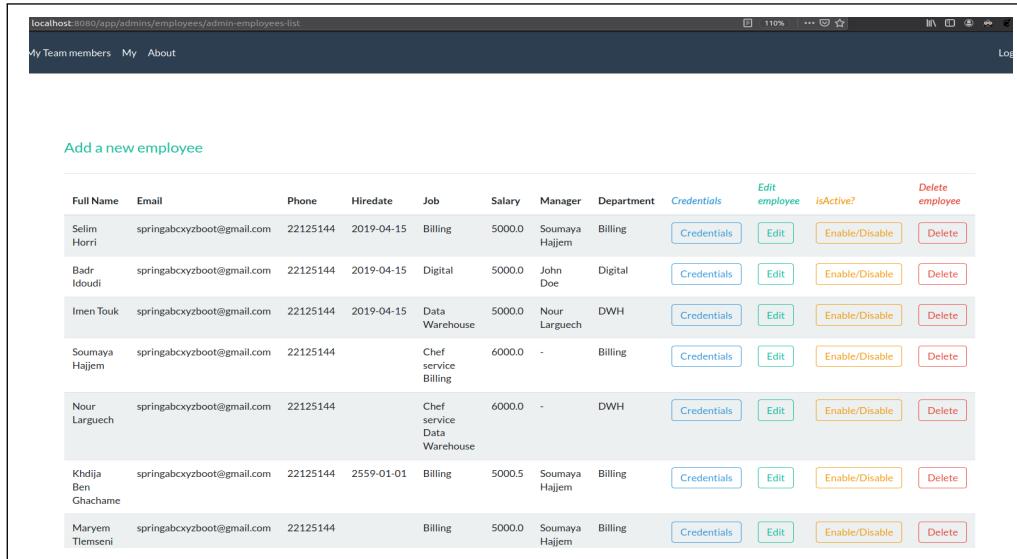

FIGURE 5.19: Home page.

### List of employees:

The interface that shows the employees and the actions to be done for each employee.

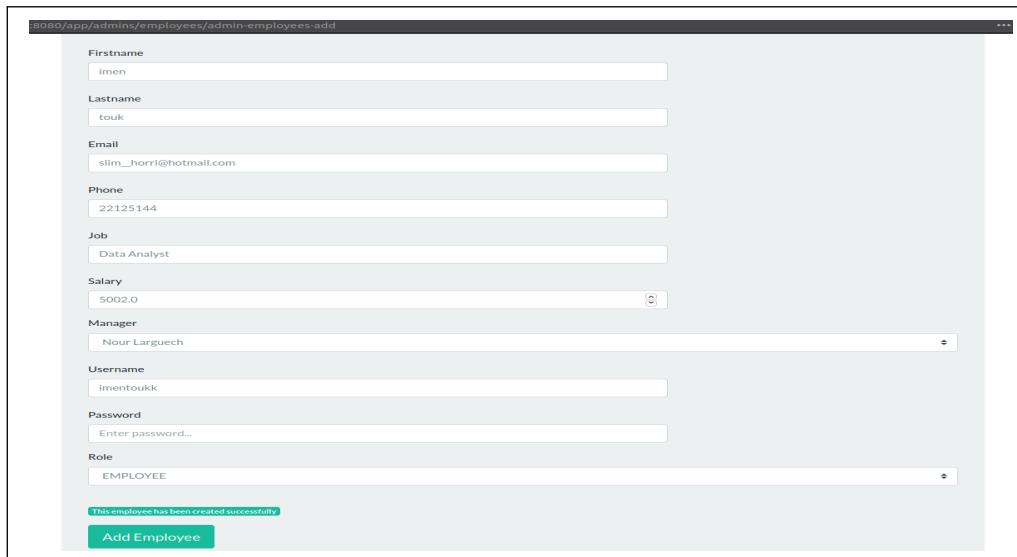

A screenshot of a web application interface titled "localhost:8080/app/admins/employees/admin-employees-list". The page has a dark header with links for "My Team members", "My", and "About". Below the header, there is a sub-header "Add a new employee". The main content is a table listing employees with the following columns: Full Name, Email, Phone, Hiredate, Job, Salary, Manager, Department, Credentials, Edit employee, isActive?, and Delete employee. Each row contains a set of buttons for managing the employee's credentials, editing their details, enabling or disabling them, and deleting them. The table lists six employees: Selim Horri, Badr Idoudi, Imen Touk, Soumaya Hajjem, Nour Larguech, and Khadija Ben Ghachame.

Full Name	Email	Phone	Hiredate	Job	Salary	Manager	Department	Credentials	Edit employee	isActive?	Delete employee
Selim Horri	springabxyzboot@gmail.com	22125144	2019-04-15	Billing	5000.0	Soumaya Hajjem	Billing	<button>Credentials</button>	<button>Edit</button>	<button>Enable/Disable</button>	<button>Delete</button>
Badr Idoudi	springabxyzboot@gmail.com	22125144	2019-04-15	Digital	5000.0	John Doe	Digital	<button>Credentials</button>	<button>Edit</button>	<button>Enable/Disable</button>	<button>Delete</button>
Imen Touk	springabxyzboot@gmail.com	22125144	2019-04-15	Data Warehouse	5000.0	Nour Larguech	DWH	<button>Credentials</button>	<button>Edit</button>	<button>Enable/Disable</button>	<button>Delete</button>
Soumaya Hajjem	springabxyzboot@gmail.com	22125144		Chef service Billing	6000.0	-	Billing	<button>Credentials</button>	<button>Edit</button>	<button>Enable/Disable</button>	<button>Delete</button>
Nour Larguech	springabxyzboot@gmail.com	22125144		Chef service Data Warehouse	6000.0	-	DWH	<button>Credentials</button>	<button>Edit</button>	<button>Enable/Disable</button>	<button>Delete</button>
Khadija Ben Ghachame	springabxyzboot@gmail.com	22125144	2559-01-01	Billing	5000.5	Soumaya Hajjem	Billing	<button>Credentials</button>	<button>Edit</button>	<button>Enable/Disable</button>	<button>Delete</button>
Maryem Tlemserni	springabxyzboot@gmail.com	22125144		Billing	5000.0	Soumaya Hajjem	Billing	<button>Credentials</button>	<button>Edit</button>	<button>Enable/Disable</button>	<button>Delete</button>

FIGURE 5.20: List of employees.

### Add an employee:

The administrator clicks on the button "Add new employee" then fill in the information of the employee to add. a message returned by the system confirms the addition.

A screenshot of a web application interface titled "localhost:8080/app/admins/employees/admin-employees-add". The page contains a form with the following fields: Firstname (Imen), Lastname (touk), Email (slim\_horri@hotmail.com), Phone (22125144), Job (Data Analyst), Salary (5002.0), Manager (Nour Larguech), Username (imentoukk), Password (Enter password...), and Role (EMPLOYEE). At the bottom of the form, a message says "This employee has been created successfully" and a green "Add Employee" button is visible.

FIGURE 5.21: Add an employee.

### Modify an employee:

The administrator clicks on the "Edit" button then modifies the information of an employee. a message returned by the system confirms the modification action.

**FIGURE 5.22: Add an employee.**

### Deactivate an employee:

The administrator clicks on the "Enable / Disable" button, a pop-up is displayed for confirmation.

**FIGURE 5.23: Home page.**

**Remove an employee:**

The administrator clicks on the "Delete" button, a pop-up is displayed for confirmation.

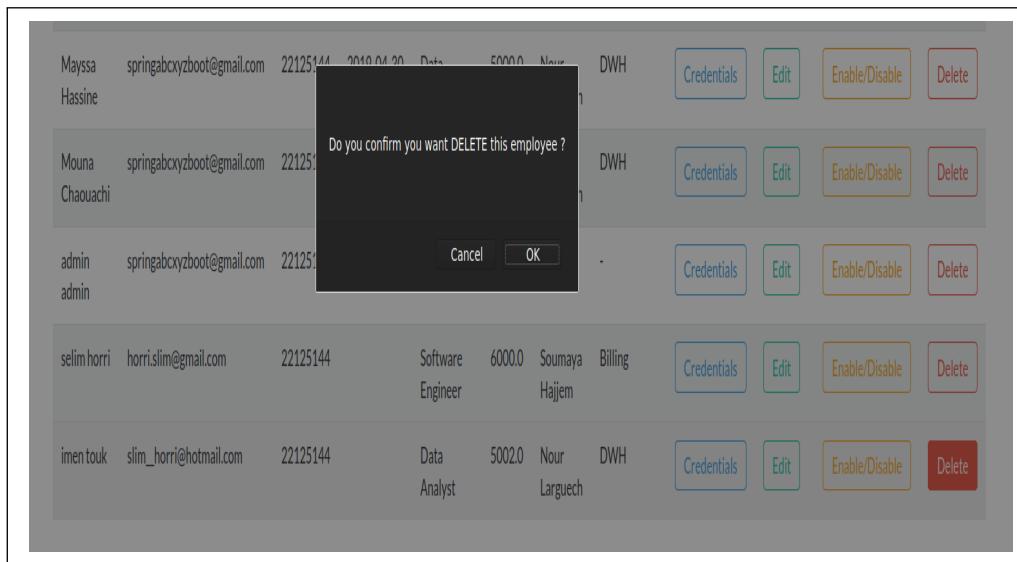

FIGURE 5.24: Home page.

## 5.6 Conclusion

Throughout this chapter, we have presented the Third Release Sprint Backlog. Then, we put the accent on its specification and its design then its realization.

---

## **GENERAL CONCLUSION**

This report presented the work carried out within the framework of an end of semester report. This project focuses on the design and implementation of the "Project Tracker" platform

For the realization of this system, a preliminary study of the applications offering the same service was very useful to identify the functionalities to be implemented and to define the specifications of our application.

The UML method, used in the design phase, allowed us to model our system well so that its understanding becomes easy.

On a technical level, this project was an opportunity for us to learn and master the Spring Boot framework.
